California: The State of Our Children 1998

I. Introduction

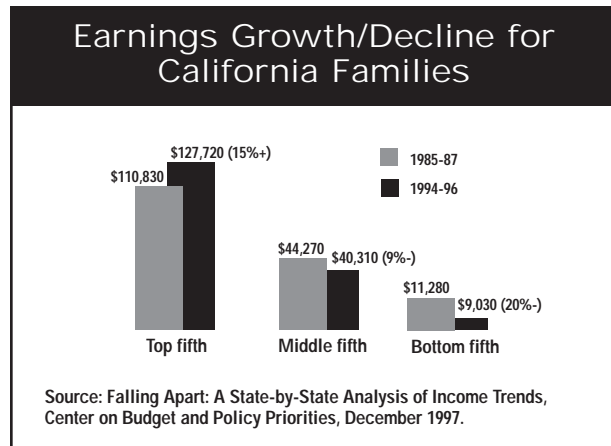

A Decade of Political and Economic Change Shapes Children's Lives

In 1998, children are on the political map. Ten years ago, when Children Now was founded, only a handful of children's policy organizations existed; today, in state capitals across the country, numerous groups are representing children's best interests. Recently we have witnessed greater attention in Congress and statehouses to child care and children's health. In California and across the nation, voters and candidates in the most recent elections put education at the top of the political agenda

But the politically powerful have *not* become reliable allies of children. Consider the 1996 federal welfare debate: seldom were children discussed although they constitute two-thirds of those affected. In state budget deliberations across the country, securing adequate funding for children's programs remains a battle that is often lost.

The Ten-Year Balance Sheet

An assessment of how the well-being of California's children has changed over the past decade yields mixed results. One of the starkest trends is the disparate economic fortunes of families. A comparison of California families' average incomes between the years 1985-87 and 1994-96 shows that families with children in the top fifth of the income range increased their income by 15%, while families with children in the middle fifth saw their incomes decline by 9% and the bottom fifth experienced an income drop of 20%. On a basic level, many more families are struggling today than a decade ago to

provide for their children.

Even with the state's current strong economy, a child is more likely to live in poverty today. And a child has no greater chance of having medical coverage or access to subsidized child care.

Yet, some areas of children's lives have improved. Compared to a decade ago, an infant today is more likely to be born to a mother who received prenatal care and is more likely to survive her first year of life. Teenagers are less likely to drop out of school. Teen births and youth homicides have declined in the past few years, after their rise in the beginning of the decade. But California has the resources to do much more.

Looking at the balance sheet for California children over the past decade, it is apparent that many sectors of society have fared better than children. Stockholders reaped gains as the S&P 500 grew by 300%. Overall, the state's economy grew by 19%. A decade from now, what will our state look like if the well-being of children posts comparable gains?

The Opportunity Ahead

Californians have reason to be optimistic about the future. The state recently recovered from its deepest recession since the 1930's. In 1997, the state's economy outperformed the nation, with employment growth of three percent—bringing an additional 400,000 jobs. Voter participation by the state's largest minority population, Latinos, increased significantly from 1984 to 1996, with 350,000 more Latino voters in the 1996 elections. California continues to be a state with remarkable human capital and natural resources.

Our resources can be harnessed much more effectively for children. Below, *An Agenda for Children and Families* lists achievable objectives for improving the quality of children's lives in California. As a state, these should be our common resolutions in preparation for the new millennium.

II. Ten-year Highlights

The state has made progress for kids in some arenas. More infants are born to mothers who received prenatal care and more infants survive past their first year. School dropout rates have shown a consistent decline. However, childhood poverty—a risk factor tied to many poor outcomes for children—has increased significantly. Vital community support, such as subsidized child care and housing, has not kept pace.

Family Economics

- In the last ten years, child poverty increased from one in five children (20.8% or 1.8 million) living in poverty to one in four (26% or 2.4 million).
- California has nearly quadrupled the number of subsidized child care slots since 1986, with about 440,000 spaces in 1997. However, with the increased demand, only about one-quarter of the children

who qualify for subsidies are currently served, approximately the same proportion as a decade ago.

- For the poorest children, the value of welfare assistance declined by 30% in the last ten years. In 1997-98, a family of three in a higher cost county received \$565 monthly, while a family in a lower cost county received \$538. In the current 1998-99 fiscal year, needy children will receive slightly more assistance: \$580 - \$610, depending upon where they live.

Health

- Little progress was made in the last decade in increasing the proportion of children with health insurance. While publicly funded programs cover more kids, fewer children receive coverage through their parents' employers. In 1996, 1.6 million children ages 0-17 (nearly 18%) lacked coverage of any kind compared to 1.2 million (or 16%) in 1987. California is only spending one-fifth of available federal funding for children's health coverage.
- About 40% of toddlers are not immunized on time, putting them at risk for contracting a serious, even life-threatening, disease.
- One of the decade's success stories has been the reduction in infant mortality. The rate of infant deaths dropped from 9.0 per 1,000 births in 1987 to 5.9 per 1,000 births in 1996. The infant death rate for African-American babies, which also declined, from 18.6 to 14.4 per 1,000 births, remains over twice as high as the rate for White babies.

Education

- From 1988 to 1997, California's ranking among states in per-pupil expenditures

dropped from 27th to 41st.

- There is no comprehensive measurement of educational achievement for California children that is consistent over time. On recent national assessments of 8th graders' reading and math skills, California tied for last among the 40 participating states.
- A greater proportion of the student body is finishing high school compared to 1988. The current average high school dropout rate for 9th - 12th graders is 3.3%, about half the rate of 1988. This trend is consistent across all ethnicities.

Safety

- Gun violence among youth and youth homicide rates rose significantly in the late 1980s and early 1990s. However, such violence has declined in recent years. The incidents of youth homicide declined from 857 homicides in 1993 to 680 in 1996.
- Child abuse reports have risen steadily over the past decade. While part of the increase may be attributed to greater awareness and reporting, the increasing number of children who have been seriously injured (not just reported for being at risk) indicates some actual rise in abuse.
- From 1987 to 1997, the number of children in foster care more than doubled: from 50,547 to 108,488.

III. An Agenda for Children & Families

California has made strides in improving some areas of children's lives in the past decade. However, outcomes are mixed. A sustained commitment of public and private sector support for families could substantially improve the lives of generations of children.

1. Health coverage for all kids. New feder-

al funding for children's coverage presents an excellent opportunity to realize the goal of providing coverage to all children, a goal that requires action from both the public and private sectors.

- Expand the Healthy Families program. New federal dollars help to fund California's Healthy Families program, which makes about 400,000 children newly eligible for coverage. Federal funds are available to cover more children and the state should expand eligibility to kids in families with incomes under \$40,950 for a family of three (300% of the federal poverty level).
- Simplify enrollment in Medi-Cal and Healthy Families. The joint Medi-Cal/Healthy Families application form, now 28 pages long, should be simplified and made easy for families to complete. Also, rather than requiring families of children in Medi-Cal to submit new paperwork every three months, California should provide children in Medi-Cal a full year of continuous coverage (as it already offers to children in Healthy Families).
- Augment the private sector's coverage of children. With innovative approaches, the private sector can do more to cover employees' dependents. Just 55% of California children receive job-based coverage compared to 62% nationally.

2. Quality child care for every child.

Additional work requirements for those receiving welfare have highlighted the urgency for additional subsidized child care. Research on the brain development of infants and toddlers has raised awareness about the importance of quality care. Today, state funding for child care subsidies does not meet about three-quarters of the estimated need.

- Continue to expand the analysis of supply and demand for various types of care—infant, preschool, afterschool, non-traditional hours, etc.—to develop a strategic plan for meeting families’ needs.
- Pool resources to meet the need for subsidized care. Explore financing solutions among the private sector, public sector and parents that allow every child who needs a subsidized space in high quality care to have one.
- Promote quality in all child care settings. Ensure that training in child development is widely available and reward providers who have undertaken additional training. Set salary levels for providers that attract and retain qualified individuals.

3. An effective child support system.

Time-limited welfare assistance raises the stakes for hundreds of thousands of families who look to the state’s child support enforcement system to secure support owed to children. The next governor faces critical decisions about how to operate the enforcement program for maximum effectiveness.

- Child support automation should be streamlined and centralized. In 1999, the new administration be responsible for automating California’s child support computer system. Centralization offers the best chance for efficiency. Maximum efficiency must be the standard for children.
 - Develop state-level strategies for improving county child support collections. The new administration must begin to reform the state’s

The next governor faces critical child support enforcement decisions.

struggling child support program through top-level leadership. Key reforms include res-structuring and streamlining the program.

4. Fair tax policies. Recent state budget actions to reduce taxes and fees have not helped struggling working families.

- Enact a state Earned Income Credit (EIC) for low-income working families. The federal EIC is a refundable tax credit designed to help parents with low earnings to provide for their children. Nine other states supplement the federal credit with a state one. California could add a 15% supplement for about half the cost of the 1998-99 vehicle license fee reduction, a reduction which will give the most benefits to those with more expensive cars.

5. Family-friendly businesses. Employer practices fundamentally affect the time and resources parents have to share with their children. With most children now having both parents or their single parent in the workforce, employer policies have a tremendous impact on families.

- Pay living wages. A living wage not only fosters employee loyalty and longevity on the job, it helps parents provide for their families.
- Design jobs as flexibly as possible. Employees who can attend parent-teacher conferences regularly or coach basketball one afternoon a month are likely to be more satisfied and even more productive employees. Permit job sharing and telecommuting when possible.
- Be a community leader. Around the state,

Family Economics

Growing economic disparity limits opportunities for low- and middle-income children as their working families struggle to put together a family budget. Housing and child care costs are major expenses for many families, with average annual rent for a two-bedroom apartment in California reaching \$9,324 (\$777 monthly) and full-time center-based child care costing between \$4,888 and \$7,020, depending on the child's age.

Source: *Pulling Apart: A State-by-State Analysis of Income Trends*, Center on Budget and Policy Priorities, December 1997; California Department of Social Services, Information Services Bureau; The California Child Care Portfolio, California Child Care Resource and Referral Network, 1997; *Out of Reach: Rental Housing at What Cost?*, National Low Income Housing Coalition, September 1997.

1. Child Care

This indicator represents the number of children whose families need subsidized care and the percentage actually being served in subsidized programs.

California Trend:

There is no annual count of the total number of children in California whose families need affordable child care.

- Between April and September 1997, 439,792 children were served through subsidized child care programs within the Department of Education and the Department of Social Services. The state estimates that it serves only about 25% of the approximately 1.7 million children eligible for child care subsidies.
- In a 1997 report to the U.S. General Accounting Office, the California Department of Education puts the number of families throughout the state on waiting lists for child care assistance at 200,000.
- In 1996, the average cost of full-time care for a child in a licensed child care center was \$135/week or \$7,020 annually; the average cost for a child 2–5 years old in a licensed child care center was \$94/week or \$4,888 annually.

Historical Trend - CA:

The Senate Office of Research estimated that 20-25% of parents who needed subsidized child care in 1988 received it. In 1986, 110,000 children were served through the state's child development programs. The number of children on waiting lists in 1986 was estimated at 134,000 by the Department of Education. The total number of unmet need in 1986 was estimated as high as 405,000 children by the Legislative Analyst's Office.

3 of 4 families eligible for child care assistance are not served due to insufficient funding.

National Average:

Because the state-based data are incomplete, it is impossible to get a national count of the percentage of children needing child care who receive it.

State Rank:

Not available.

Notable Facts:

Low-income parents face particular challenges in gaining access to child care. The Berkeley-Stanford PACE Center's study on California child care availability, *An Unfair Head Start*, found that a "family's opportunity to enroll their youngster in a preschool or child-care program depends largely on their income and where they live." In Los Angeles County, for example, the supply of child care is 40% higher in neighborhoods with incomes above the county median than in areas with incomes below the county median. The survey also suggests a negative correlation between the availability of child care and the concentration of Latino families within a given area. Areas with concentrations of Latino families above the median have 46% fewer child care spaces than those areas where the concentration of Latino families is below the median.

Source: Results for the April-September 1997 ACF-800 Aggregate Report on Subsidized Child Care, California Department of Education, Child Development Division, Data Automation and Analysis Unit; *An Unfair Head Start*, Policy Analysis for California Education, University of California, Berkeley, Stanford University, 1997; *California: Child Care Challenges*, Children's Defense Fund, May 1998; *Caring For Our Children: Our Most Precious Investment*, September 1998, Little Hoover Commission; The California Child Care Portfolio, 1997, California Child Care Resource and Referral Network; The Child Development Program: A Sunset Review, Office of the Legislative Analyst, February 1989. See also *California: The State of Our Children and Report Card, 1989*, Children Now; *Welfare Reform: Implications of Increased Work Participation for Child Care*, United States General Accounting Office, May 1997.

2. Child Support

This indicator represents the percentage of cases in the state child support system for which some money has been collected. This figure reflects the collections as a percent of all cases, recognizing that even cases without orders in place represent children awaiting child support.

California Trend:

	1993	1994	1995	1996
Case with Support Collections	12.5%	12.9%	13.9%	17.2%*

Historical Trend - CA:

1987	1996
18.8%	17.2%*

* Estimate based on U.S. Department of Health and Human Services' preliminary report.

National Average:

In 1996, 20.5% of all child support cases under the U.S. Office of Child Support Enforcement received some support. In 1987, 16.6% of all cases received some payment.

State Rank:

In 1996, California ranked 37th of 51 (50 states and the District of Columbia).

Historical Trend - State Rank:

1987	1996
17th of 51	37th of 51

Child support is collected for less than 1 in 5 children awaiting support.

Source: *California's Child Support Failure: Stalling Welfare Reform, 1997*, National Center for Youth Law, The Child Support Reform Initiative and Children Now; Twelfth Annual Report To Congress, U.S. Department of Health and Human Services, Administration for Children and Families, Office of Child Support Enforcement; Preliminary Child Support Enforcement FY 1996 Data Report, Ibid.

3. Children in Poverty

This indicator represents the percentage of children under the age of 18 living below the poverty level. The poverty threshold for a family of three with two children was \$12,641 in 1996.

California Trend:

	1993	1994	1995	1996
Poverty Rate	28.6%	28.2%	25.5%	26.0%
Children in Poverty (in millions)	2.7	2.5	2.4	2.4

Historical Trend - CA:

1987	1996
20.8%	26.0%

National Average:

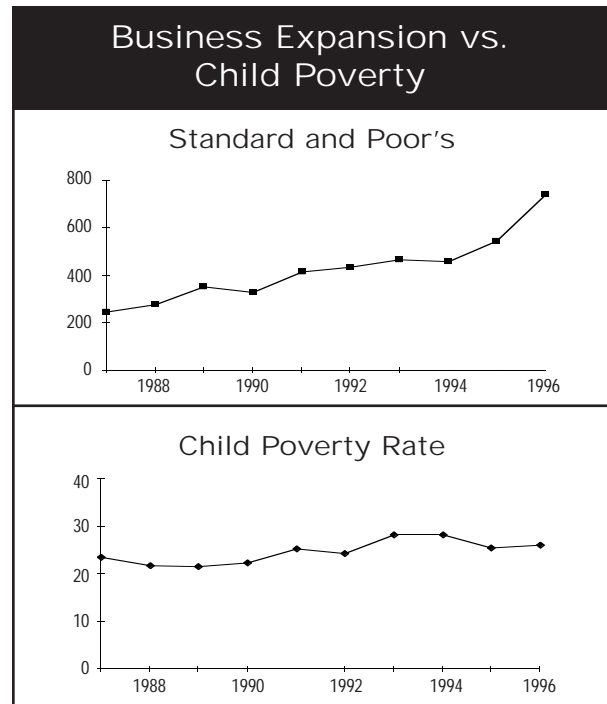

20.5% of all children under 18 were poor in 1996. In 1987, 20.3% of all children under 18 lived in poverty.

State Rank:

In 1996, California ranked 43rd of 51 (50 states and the District of Columbia).

Historical Trend - State Rank:

1987	1996
31st of 51	43rd of 51

Source: California State Department of Finance, California Current Population Survey Report: March 1997 Data; U.S. Census Bureau, Housing and Household Economic Statistics, Population Branch, March 1997 data from Current Population Survey.

4. Public Assistance

This indicator represents the maximum monthly Temporary Assistance to Needy Families (TANF) grant for a family of three with no other income compared to the fair market rent.

California Trend:

	94-95	95-96	96-97	97-98
TANF grant:	\$607	\$594	\$565	\$565
FMR*	\$635	**	\$777	\$777
% of Income	105%		138%	138%
# of children*** (millions)	1.8	1.8	1.7	1.6

* The fair market rent is an estimate by the U.S. Department of Housing and Urban Development of the cost of a modest two bedroom apartment plus the cost of utilities, except telephone.

** Information not available.

*** Represents average monthly recipients.

Historical Trend - CA:

	1988-89	1997-98
TANF grant (welfare)	\$663	\$565
# of children (millions)	1.2	1.6

National Average:

In April 1997, the median state's maximum monthly grant for a family of three with no other income was \$377 and the median state's FMR for a two bedroom apartment was \$558, 148% of the family's income.

State Rank:

In 1996-97, California ranked 18th of 51 (50 states and the District of Columbia).

Historical Trend - State Rank:

1987-88	1996-1997
NA	18th of 51

Value of Public Assistance Payments

1. Maximum monthly grant for a family of three in a high-cost county.

2. Federal poverty level for a family of three.

Source: California Budget Project

Despite the recent increase in public assistance cash grants, the maximum grant remains between 75% and 78% of the state fair market rent.

Source: Public Welfare in California, Annual Report Series, California Department of Social Services, Information Services Bureau; *Out of Reach: Rental Housing at What Cost?*, September 1997, National Low Income Housing Coalition; Khadduri, Schroder, and Steffen, *Welfare Reform and HUD-Assisted Housing: Measuring the Extent of Needs and Opportunities*, Fannie Mae Foundation Research Roundtable

5. Hungry Children

This indicator represents the number of children who experience “food insecurity,” or, stated differently, were not “assured access to enough food for an active, healthy life,” as defined and measured by the U.S. Department of Agriculture.

California Trend:

No one agency or organization takes an annual count of hungry children in California or nationally. In

About 14% of California's children do not have enough food for an active, healthy life.

September 1997, the U.S. Department of Agriculture released estimates of “food insecurity” from the first Food Security Supplement to the Current Population Survey, the principal

survey used to determine state and national poverty rates. The supplement captures food insecurity among Americans for the period ending April 1995. The state and national results are as follows:

1994-1995 All Persons	CA	U.S.	CA Rank
Food Insecure	14.4%	11.9%	44th of 51
Food Insecure, Hunger not evident	9.6%	7.8%	45th of 51
Food Insecure, Moderate Hunger Evident	3.8%	3.3%	33rd of 51
Food Insecure, Severe Hunger Evident	1.0%	0.8%	36th of 51

In addition, the survey showed that 17.6% of households with children experienced some food insecurity between April 1994 and April 1995, compared to 9.8% of households without children.

Notable Facts:

The California Food Policy Advocates further documented food insecurity among California's children (specifically among immigrant communities) through their survey and subsequent report, *Impact of Legal Immigrant Food Stamp Cut*. The researchers surveyed impacted communities in Los Angeles at the beginning of the food stamp cuts under welfare reform (November 1997) and again in March 1998. The survey showed 40% of families with children experienced varying levels of food insecurity in November 1997. Five months later, 50% of these same families experienced food insecurity. A smaller increase in food insecurity was also experienced by a control group, from 33% to 38%, during this same time period

Source: *Household Food Security in the United States in 1995: Summary Report of the Food Security Measurement Project*, September 1997, U.S. Department of Agriculture, Food and Consumer Service; *Impact of Legal Immigrant Food Stamp Cuts in Los Angeles and San Francisco*, May 1998, California Food Policy Advocates, California Food Security Monitoring Project.

6. Homelessness/Housing

This indicator represents the number of children and youth under age 18 who live in shelters and on the street because they have no home.

California Trend:

No one agency or organization takes an annual count of homeless children in California or for the nation as a whole.

However, an annual 29-city survey conducted by the U.S. Conference of Mayors estimates families with children constituted 36% of the homeless population across the U.S. in 1997. The survey also notes a 5% increase, from 1996 to 1997, in requests for emergency shelter by families with children, with 64% of the surveyed cities reporting

The U.S. Conference of Mayors estimates children constituted 25% of the homeless population in 1997.

an increase. In the same time period, the number of emergency shelter beds decreased by 3%.

The lack of affordable housing continues to be identified as a

major cause of homelessness among families with children in most of the surveyed cities, including the three California cities—San Diego, San Francisco, and Santa Monica. Overall, in 75% of the cities surveyed, requests for assisted housing by low-income families and individuals increased during the year. These families spent an average of 45%

of their income on housing. In California, the fair market rent (FMR) for a two-bedroom apartment was \$777 in 1997; the rent on a one-bedroom apartment was \$620.

California's FMR remains significantly above the median two-bedroom apartment FMR for the United States (\$558). Only 3 states and the District of Columbia have higher rents than California.

A family of three surviving on Temporary Aid to Needy Families (TANF) received \$565 a month in 1997-98, which is \$212 dollars less than the FMR on a two-bedroom apartment and \$55 less than the FMR on a one-bedroom apartment.

Historical Trend - CA:

Ten years ago, 19% of requests for emergency shelter went unmet in the surveyed cities. Today that number is up to 27% overall and 36% for families with children, up from 23% in 1988. Children continue to constitute 25% of the homeless population in the surveyed cities ten years later.

National Average:

Not available.

State Rank:

Notable Facts:

Contrary to popular perception, most families receiving public assistance do not also receive housing assistance. United States Department of Housing and Urban Development (HUD) data shows that, in 1996, only 13% of California families receiving public assistance also received HUD assistance. In larger percentages than any state other than Michigan (with 11% of welfare families receiving housing assistance), California families receiving public assistance have to cover the cost of housing without HUD subsidies.

Source: *A Status Report on Hunger and Homelessness in America's Cities: 1988*, U.S. Conference of Mayors; *A Status Report on Hunger and Homelessness in America's Cities: 1997*, Ibid.; *Out of Reach: Rental Housing at What Cost?*, September 1997, National Low Income Housing Coalition; U.S. Department of Housing and Urban Development.

7. Unemployed Youth

This indicator represents the number and percentage of 16- to 19-year-olds who are unemployed and are actively looking for work.

California Trend:

	1994	1995	1996	1997
Percent	22.8%	22.7%	23.1%	21.1%
Number (in thousands)	182	175	176	152

Historical Trend - CA:

1988	1997
15.7%	21.1%

National Average:

In 1996, 16.7% of youth 16- to 19- years old were unemployed nationally. In 1987, the national average was 16.9%.

State Rank:

In 1996, California ranked 47th of 49 states.

Historical Trend - State Rank:

1987	1996
28th of 50	47th of 49

Source: Current Population Survey, Bureau of Labor Statistics, unpublished data (re: 1997 unemployed youth rate and number); *Geographic Profile of Employment and Unemployment*, 1996, U.S. Department of Labor, Bureau of Labor Statistics. Rank calculated by Children Now.

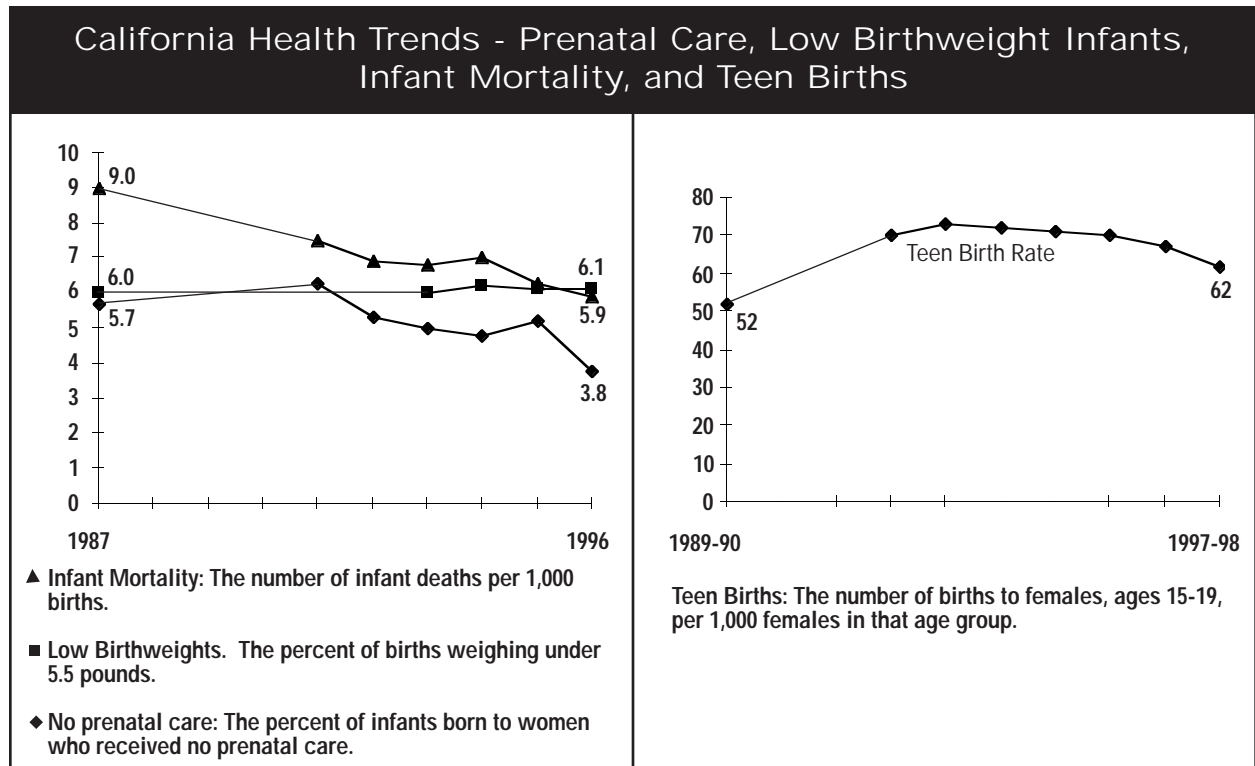

Health

Prenatal Care
Low Birthweight Infants
Infant Mortality
Immunizations
Uninsured Children
Use of Nutrition Program
Mental Health
Smoking
Drugs and Alcohol Use
Teen Births

Health

Health care for pregnant women and infants has improved in some areas. More women are receiving prenatal care and more infants survive their first year of life. However, low birthweight rates have not improved; low birthweight is an indicator of a newborn's health and a factor in an infant's chances of survival and future healthy development.

More women are receiving prenatal care and infant mortality rates have improved, however the proportion of infants born at low birthweight has remained about the same over the past decade.

Source: Department of Health Services, Center for Health Statistics.

1. Prenatal Care

This indicator represents the percentage of infants born to women who received no prenatal care during pregnancy, or only received care during the last trimester.

California Trend:

	1993	1994	1995	1996
Percent	5.0%	4.8%	5.2%	3.8%

In 1996, 20,328 women (3.8%) did not receive prenatal care or began prenatal care in the third trimester of their pregnancy.

Historical Trend - CA:

1987	1996
5.7%	3.8%

National Average:

In 1995, 4.2% of women giving birth did not receive prenatal care or began prenatal care in the third trimester of their pregnancy. In 1986, the national average was 6.0%, while California's rate was 5.7%.

State Rank:

In 1995, California ranked 44th of 51 (50 states and the District of Columbia).

Historical Trend - State Rank:

1986	1995
36th of 51	44th of 51

Notable Facts:

As noted above, although California's prenatal care ranking has fallen relative to other states since 1986, the actual rate has improved from 5.0% in 1987 to 3.8% in 1996. Prenatal care rates also improved across racial lines. However, children born to White parents have experienced the most improvement. For example, the percent of infants born to African-American women who received late or no prenatal care was 1.3 times that of White women in 1987. In 1996, it was 1.8 times that of White women. A similar disparity exists for Latinos. Also, in 1987, the rate for Asians and Pacific Islanders was less than Whites. In 1996, this rate was greater for Asian and Pacific Islander families, while the rate for Native Americans has in fact increased, from 7.1% in 1987 to 7.5% in 1996.

Source: Center for Health Statistics, California Department of Health; "Report of Final Natality Statistics, 1995." Monthly Vital Statistics Reports, Vol. 45, No. 11, Supplement, National Center for Health Statistics, Center for Disease Control and Prevention.

2. Low Birthweight Infants

This indicator represents the percentage of live births with birthweights less than 2,500 grams (5.5 lbs.).

California Trend:

	1993	1994	1995	1996
Percent	6.0%	6.2%	6.1%	6.1%

A total of 32,649 babies (6.1%) were born in 1996 weighing less than 2,500 grams.

Historical Trend - CA:

1987	1996
6.0%	6.1%

National Average:

The national average was 7.3% in 1995 and 6.8% in 1986.

State Rank:

In 1995, California ranked 13th of 51 (50 states and the District of Columbia).

Historical Trend - State Rank:

1986	1995
17th of 51	13th of 51

Low Birthweight Infants, by race, 1996 vs. 1987

Notable Facts:

The low birthweight rates for Native American, Asian, Latino, and White children increased slightly since 1987. On a positive note, the low birthweight for African-American children declined, from 12.4% in 1987 to 12.0% in 1996. Nevertheless, the low birthweight rate for African-American children remains nearly twice the rate of Native Americans, Asians, and Whites and nearly two and one half times the rate of Latinos.

Source: Center for Health Statistics, California Department of Health; "Report of Final Natality Statistics, 1995," Monthly Vital Statistics Reports, Vol. 45, No. 11, Supplement, National Center for Health Statistics, Centers for Disease Control and Prevention.

3. Infant Mortality

This indicator represents the number of infants who die in their first year of life per 1,000 live births.

California Trend:

	1993	1994	1995	1996
Rate	6.8	7.0	6.3	5.9

In 1996, there were 3,186 infant deaths.

Historical Trend - CA:

1987	1996
9.0	5.9

National Average:

The infant mortality rate was 7.6 deaths per 1,000 live births in 1995. In 1986, the national infant mortality rate was 10.4 per 1,000 live births.

State Rank:

California ranked 11th of 51 (50 states and the District of Columbia) in 1995.

1986	1995
8th of 51	11th of 51

The mortality rate for African-American infants is 2.5 times that of White children.

Notable Facts:

In 1987, the infant mortality rate for African-American children was 18.5 per 1,000 live births, or 2.2 times the rate for White children (8.4 per 1,000 live births). A decade later (1996), the infant mortality rate for White and African-American children improved to 5.5 and 13.9 respectively. However, the mortality rate for infant African-American children is now 2.5 times the rate for White children.

Source: Centers for Health Statistics, California Department of Health; "Infant Mortality Data from the Linked Birth/Infant Death Data Set--1995 Period Data," Monthly Vital Statistics Reports, Vol. 46, No. 6, Supplement 2, National Center for Health Statistics, Centers for Disease Control and Prevention; "Annual Summary of Vital Statistics," Pediatrics, Volume 100, No. 6, December 1997.

4. Immunizations

This indicator represents the percentage of two-year-olds appropriately immunized for their age.*

California Trend:

	1994	1995	1996	1997
Percent	57.2%	55.4%	57.3%	59.2%

* Fully immunized two-year-olds have received four DTP (diphtheria, tetanus and pertussis), three oral polio vaccines, and one MMR (measles, mumps and rubella) vaccine, known as the 4:3:1 series.

Historical Trend - CA:

1988	1997
45.7%	59.2%

National Average:

78% of children 19-35 months were adequately immunized in 1997, according to the National Immunization Survey administered by the Centers for Disease Control. In 1994, the first year of the survey, 75% were adequately immunized. The survey showed the comparative percentages for California were 76% and 74% respectively for 1997 and 1994.

State Rank:

California ranked 31st of 51 (50 states and the District of Columbia) in 1997.

Historical Trend - State Rank:

1994*	1997
30th of 51	31st (5 tied) of 51

* The first year of the National Immunization Survey was 1994.

Immunization Rates, by race, 1997 vs. 1990

Notable Facts:

Available ethnicity data for the California Retrospective Survey of Kindergarten Children goes back to 1990. Since this time, immunization rates have improved for all ethnic groups. Specifically, immunization rates for White two-year-olds improved 38%, from 47.3% to 65.2%, Latino rates improved 55% to 53.7%, and Asian rates improved 77% to 66.5% in 1997, from 37.5% in 1990. The rate of immunization for African-American two-year-olds more than doubled, from 20% in 1990 to 44.8% in 1997. Despite this considerable improvement, rates of immunization for African-American two-year-olds lag behind the rates for White and Asian children by a ratio of 3 to 2. African-American two-year-olds are the only ethnic group whose rate of immunization is less than 50%.

Source: California Kindergarten Retrospective Survey Results, 1997: Summary Tables, California Department of Human Services, Immunization Branch; "National, State, and Urban Area Vaccination Coverage Levels Among Children Aged 19-35 Months—United States, July 1996 to June 1997," Morbidity and Mortality Weekly Report, February 20, 1998, National Center for Health Statistics, Centers for Disease Control.

5. Uninsured Children

This indicator represents the percentage of children under 18 who had no health insurance coverage, public or private, through an entire year.

California Trend:

	1993	1994	1995	1996
Percent	17.6	20.0	17.4	17.8
# of children (millions)	1.65	1.79	1.60	1.63

Historical Trend - CA:

1987	1996
16.1%	17.8%

National Average:

In 1996, 14.8% of children (or nearly 10.6 million) lacked insurance nationally. In 1987, 12.9% of children (8.2 million) lacked insurance.

State Rank:

California ranked 39th of 51 (50 states and the District of Columbia) in 1996.

Historical Trend - State Rank:

1987	1996
37th of 51	39th of 51

1999 Federal Funds vs. Expansion Costs

1. Estimated unspent federal funds if all eligible children enroll in Healthy Families in FY99.

2. Estimated federal funds needed to expand Healthy Families to children with income up to \$40,950 (for a family of three): a \$70 million state match would be required.

California is now spending just 1/5 of available federal funds for children's health coverage.

Source: "Health Insurance Coverage Status and Type of Coverage by State—Children Under 18: 1987 to 1996," Table HI-5, U.S. Bureau of the Census, Housing and Household Economic Statistics Division.

6. Use of Nutrition Program

This indicator represents the fiscal year average monthly number of nursing mothers, infants and children younger than 5 who receive nutrition supplements through the Women, Infants & Children (WIC) program.

California Trend:

Fed Fiscal Year	93-94	94-95	95-96	96-97
# served (in thousands)	838	1,004	1,142	1,224

Historical Trend - CA

Fed Fiscal Year	1987-88	1996-97
# served (in thousands)	303	1,224

The California Special Supplemental Food Program for Women, Infants and Children offers supplemental nutritious food and nutrition education to low-income pregnant, breastfeeding, and postpartum women.

California's program is the nation's largest and is 100% federally funded. The increase in the number of women served is due solely to increased federal funds. WIC is not an entitlement program.

In 1995, the most recent year for which data is available, 52% of all eligible California children received assistance through the WIC

program. In 1992, the earliest year for which data is available, 27% of all eligible children were served.

* A family is eligible for the WIC program if its income is at or below 185% of the federal poverty level. In 1995, the federal poverty level for a family of four with 2 related children was \$15,455; 185% of this amount is \$28,592.

National Average:

In Fiscal Year 1997, the average monthly participation was 7,185,763. Ten years earlier, in 1988, the average monthly participation rate was 3,592,833. In 1996, the Office of Evaluation and Analysis of the WIC program estimated that approximately 9 million women, infants, and children in the general population were eligible to receive WIC benefits. Of those eligible, 81% participated in the program.

State Rank:

Not applicable.

Notable Fact:

In 1993, the Department of Agriculture sponsored a five-state study, wherein researchers found WIC participation to be associated with a significant reduction in infant mortality, particularly neonatal mortality.

Source: Supplemental Food Programs, Food and Nutrition Services, U.S. Department of Agriculture; *Infant Mortality Among Medicaid Newborns in Five States: The Effects of Prenatal WIC Participation*, U.S. Department of Agriculture, Food and Nutrition Service, Office of Analysis and Evaluation, May 1993.

7. Mental Health

This indicator represents the number of children and young persons in need of mental health services and the actual percentage being served.

California Trend:

No one agency regularly compiles data on the prevalence or incidence of mental disorders among children. However, a 1994 report based on a 1992 household survey conducted by the California State Department of Mental Health estimated that 445,000-623,000 children, or approximately 5-7% of California children, were in need of special mental health services. Statewide data does exist for the number of children served through local county mental health programs and the number of children served through the federal Individuals with Disabilities Education Act (IDEA):

California Mental Health Programs

	93-94	94-95	95-96
Children age 0-17	74,012	76,135	79,302

Historical Trend - CA

	86-87	95-96
Children age 0-17	61,020	79,302

The change between 1987 and 1996 represents a 30% increase in the number of children served through mental health programs. During this time, the number of children, ages 0-17, in California has increased by 22%.

Individuals with Disability Education Act-California:

Children and young adults served, ages 6-21*:

	1994	1995	1996*
Mental Retardation	26,554	27,349	28,706
Serious Emotional Disturbance	15,636	16,372	18,020
% of all disabilities	8.8%	8.9%	9.1%

*Federal fiscal year.

Historical Trend - CA

Children and young adults served, age 6-21:

	1988	1996
Mental Retardation	24,348	28,706
Serious Emotional Disturbance	10,891	18,020

The total population served for Serious Emotional Disturbance increased 65% between 1988 and 1996. This increase is significantly greater than the total increase in the population, ages 6-21, between 1988 and 1996, of 8.7%.

National Average:

Data for the number of children receiving services through mental health programs nationwide is not regularly compiled. In addition, there is no one study of national scope from which to derive prevalence estimates.

However, using several studies within different regions across the U.S., the Center for Mental Health Services within the U.S. Department of Health and Human Services estimates that 5-9% of youth, ages 9-17, in 1996 were inflicted with “serious emotional disturbance and extreme functional impairment.” The Center also estimates that 9-13% of youth, ages 9-17, were inflicted with “serious emotional disturbance, with substantial functional impairment” and 20% were inflicted with some “diagnosable disorder.”

Individuals with Disability Education Act-U.S.:

Children and young adults served, age 6-21:

	1987	1996*
Mental Retardation	579,133	570,558
Serious Emotional Disturbance	370,956	437,267

Distinct from the California statewide data, the number of Mental Retardation children and young adults served nationally under IDEA declined nationwide between 1988 and 1996 (California saw an increase of 18% during this time). The total population, ages 6-21, served for Serious Emotional Disturbance increased 18% nationwide during this time.

*Federal fiscal year.

Source: *The California Household Mental Health Survey of 1992*, California Department of Mental Health, Statistics and Data Analysis; “Local Mental Health Programs Unduplicated Number of Clients By County and Age Group,” State Fiscal Year 1987, 1994, 1995, 1996, Ibid.; *Eighteenth Annual Report to Congress on the Implementation of Individuals with Disabilities Education Act*, 1996, U.S. Department of Education, Office of Special Education and Rehabilitation Services; *Nineteenth Annual Report to Congress on the Implementation of Individuals with Disabilities Education Act*, 1997, Ibid.; Mental Health, United States, 1996, U.S. Department of Health and Human Services, Center for Mental Health Services.

8. Smoking

This indicator represents the percentage of 9th grade students who smoke one or more cigarettes daily.

California Trend:

	89-90	91-92	93-94	95-96
Percent	9.3%	6.3%	8.6%	8.4%

Historical Trend - CA

1985-86	1995-96
13.0%	8.4%

Although the survey (the Biennial California Student Substance Use Survey from which the data above was drawn) has been conducted for a decade, comparisons between current and earlier findings should be made with caution due to parental consent requirements implemented in 1995-96.

National Average:

There is no direct comparison to the California figures cited above. However, in the annual "Monitoring the Future Study" conducted by the University of Michigan for the National Institute on Drug Abuse, 9.0% of 8th graders surveyed indicated that they smoked cigarettes daily in 1997, down from 10.4% in 1996. In 1991, the earliest year for which data on 8th graders is available, 7.2% of 8th graders smoked cigarettes daily.

Prevalence of cigarette use is significantly greater among 12th graders. In 1997, 24.6% of 12th graders smoked daily. This compares with 18.7% in 1987.

Approximately 4.5 million youths, ages 12-17, a rate of 19.9%, were current smokers in 1997. In 1988, an estimated 11.8% of youth, ages 12-17, were current smokers.

State Rank:

Not available.

Nationwide almost 20% of young people ages 12-17 were current smokers in 1997.

Source: *The Sixth Biennial California Student Substance Use Survey for Grades 7, 9, 11, 1995-96*, California Department of Justice, Office of the Attorney General, Crime and Violence Prevention Center; *Monitoring the Future Study, 1997*, University of Michigan, Survey Research Center; *Preliminary Results from the 1997 National Household Survey on Drug Abuse*, U.S. Department of Health and Human Services, Substance Abuse and Mental Health Services Administration; *Ibid.*, 1988.

9. Drugs and Alcohol Use

This indicator represents the percentage of 11th grade students who have used alcohol or illicit drugs in the past 30 days.

California Trend:

	93-94	95-96
Alcohol	50.1%	47.7%
Any illicit drug	32.2%	30.8%

Historical Trend - CA:

Data for alcohol and illicit drug use among 11th graders is not available before 1993-94. Additionally, although the survey (the Biennial California Student Substance Use Survey) from which the data above was drawn has been conducted for a decade, comparisons between current and earlier findings should be made with caution due to parental consent requirements implemented in 1995-96.

National Average:

There are no national figures directly comparable to the California figures cited above. The Monitoring the Future report, conducted by the University of Michigan for the National Institute on Drug Use, found 26.2% of 12th graders and 23.0% of 10th graders admitted using illicit drugs within 30 days of the study. These figures contrast with rates of 16.4% and 11.6% respectively in 1991, the earliest year for which data is available. Marijuana continues to be one of the more popular drugs among high school students with 23.7% of 12th graders and 20.5% of 10th graders admitting to its use within 30 days of the 1997 study, compared with 13.8% and 8.7% respectively in 1991.

State Rank:

Source: *The Sixth Biennial California Student Substance Use Survey for Grades 7, 9, 11, 1995-96*, California Department of Justice, Office of the Attorney General, Crime and Violence Prevention Center; *Monitoring the Future Study, 1997*, University of Michigan, Survey Research Center; *Preliminary Results from the 1997 National Household Survey on Drug Abuse*, U.S. Department of Health and Human Services, Substance Abuse and Mental Health Services Administration.

10. Teen Births

This indicator represents the number of births to females, ages 15-19, per 1,000 females in that age group.

California Trend:

	1993	1994	1995	1996
Rate	71	70	67	62

A total of 63,118 babies were born to California teenagers ages 15-19 in 1996.

Historical Trend - CA

1987	1996
52	62

National Average:

In 1995, the teenage birth rate was 57 per 1,000. Ten years earlier, the national teen birth rate stood at 50 per 1,000 women ages 15 to 19 years old.

State Rank:

In 1995, California ranked 41st of 51 (50 states and the District of Columbia).

Historical Trend - State Rank:

1986	1995
35th of 51	41st of 51

The teen birth rate for Latinos stands at nearly 4 times the rate of White teenagers.

Notable Facts:

Between 1990 and 1996, teen birth rates improved from 70 to 62 births per 1,000 teenagers. This improvement is consistent across racial lines, most notably for African-American and White teenagers. In recent years the Latino teen birth rate has also improved. However, it remains slightly higher than in 1990 (113 in 1996 compared to 111 in 1990). During this time period, the birth rate among White teenagers declined significantly, from 43 to 30 per 1,000 White teenage women.

Source: Center for Health Statistics, California Department of Health; "Report of Final Natality Statistics," 1995, Monthly Vital Statistics Reports, Vol. 45, No. 11, Supplement, National Center for Health Statistics, Centers for Disease Control and Prevention; "Teenage Births in the United States: National and State Trends, 1990-1996", Ibid.

Education

California's rankings among states has fallen and/or remained low in a number of educational categories, including pupil/teacher ratio, per pupil expenditure, reading and math skills. However, California's dropout rate, which cannot be directly compared across states, has steadily improved in the last decade.

California Ranking Trend - Pupil/Teacher Ratio, Per Pupil Expenditure, Reading Skills, and Math Skills

Dropout rates have improved for students of all ethnic groups

Source: U.S. Department of Education, National Center for Education Statistics; National Education Association.

1. Preschool Education

This indicator represents the number and percentage of 3-, 4-, and 5-year-olds who receive early childhood education through programs such as Head Start.

California Trend:

Similar to child care, no data is collected to measure the extent of need for early childhood education in California. In fiscal year 1996-97, 43,555 full-time equivalent children were served through the state's preschool program. Due to increased financing beginning in fiscal year 1997-98, 73,425 children were served between April 1, 1997 and September 30, 1997. Additionally, 79,929 California children were enrolled in the federally funded Head Start program.

Historical Trend - CA:

Based on a survey conducted in 1986, approximately 21,240 young children were served by California's State Preschool Program. In 1989, an estimated 35,170 children in California were served by Head Start. The state's child population has grown by 38% since 1986, while the percent of children served through the state preschool program has grown by 276%. Despite this improved investment, the need for state preschool services continues to go largely unmet.

National Average:

Not available. In 1996, 61% of all 3-, 4-, and 5-year-old children were enrolled in public and private pre-primary programs, up from 55% ten years earlier (1987).

In 1997, 793,809 U.S. children were enrolled in a Head Start Program. In 1988, ten years earlier, 448,464 U.S. children were enrolled in Head Start. The Head Start Bureau of the Department of Health and Human Services estimates that it currently serves about 40% of all eligible* children.

* Children between the ages of 3 and 5 in families that meet the federal poverty guidelines are eligible for Head Start services. In 1997, the federal poverty guideline for a family of 4 was \$16,050.

State Rank:

Not available.

Source: Head Start Statistical Fact Sheet, February 1998, Head Start Bureau, U.S. Department of Health and Human Services; Digest of Educational Statistics, 1997, U.S. Department of Education, National Center for Education Statistics; Kids Count Data Book, 1998, Annie E. Casey Foundation.

2. Pupil/teacher ratio

This indicator represents the number of pupils in average daily attendance per teacher in California public schools.

California Trend:

	Fall 93	Fall 94	Fall 95	Fall 96
Ratio	23.8	23.7	24.1	22.9

Historical Trend - CA

Fall 1987	Fall 1996
23.0	22.9

National Average:

The national average pupil/teacher ratio was 17.3 during the Fall 1995 school year. In 1986, the national average was 17.8.

State Rank:

California ranked 51st of 51 (50 states and the District of Columbia) in 1995.

Historical Trend - State Rank:

Fall 1986	Fall 95
49th of 50	51st of 51

3. Per Pupil Expenditure

This indicator represents the current expenditures for public elementary and secondary schools for each pupil in average daily attendance during the school year.

California Trend:

	93-94	94-95	95-96	96-97
Amount	\$4,745	\$4,799	\$4,924	\$5,327*

* estimate

Historical Trend - CA

1987-88	1996-97
\$3,868	\$5,327

National Average:

The national per pupil expenditure average is estimated at \$6,360 for the school year 1996-97. A decade earlier the national per pupil expenditure average was \$4,279.

State Rank:

In 1996-97, California's per pupil expenditure ranking is estimated at 41st of 51 (50 states and the District of Columbia).

Historical Trend - State Rank:

1987-88	1996-97
27th of 51	41st of 51

Notable Facts:

California spent \$33 for every \$1,000 in 1995 personal income on the 1994-95 school year, ranking 48th among states for its school finance effort.

Source: Ranking of the States 1997, National Education Association, Research Division; California Department of Education, Education Finance Division.

4. Reading and Math Skills

This indicator represents the average proficiency in reading comprehension for 4th grade and math skills for 8th grade public school students, as determined by the National Assessment of Education Progress (NAEP).

California Trend:

The NAEP Reading (Main) Assessment rates students' reading proficiency on a scale of 0 to 500. Students in the 4th grade must score at least 208 points to achieve a NAEP rank of "Basic" reading ability. The Assessment was not begun until 1992, and, beginning in 1998, is scheduled to take place every 4 years.

Reading Scores - 4th graders:

	1990	1992	1994
Scores	NA	203	197

National Average:

212 in 1994.

State Rank:

38th (tied) of 39 states participating in program.

Historical Trend - State Rank:

1992	1994
40th of 42	38th (tied) of 39

California Trend:

Math Scores - 8th graders:

	1990	1992	1996
Scores	256	260	263

National Average:

271 in 1996. As with the Reading (Main) Assessment exam, the Math (Main) Assessment exam has only recently been administered, and so comparable historical data do not exist. The next exam is scheduled for 2000 and every 4 years thereafter.

State Rank:

Tied for 31st of 41 in 1996.

Historical Trend - State Rank:

1990	1996
26th (4 tied) of 35	31st (tied) of 41

The NAEP Math Assessment rates students' math skills as follows:

- (200) simple addition and problem solving;
- (250) simple multiplication and 2-step problem solving;
- (300) reasoning and problem solving for fractions, decimals, percents, elementary geometry and simple algebra.

5. Dropout Rate

The indicator represents the percentage of 9th, 10th, 11th and 12th grade students who leave school and do not notify the school of a change of residence.

California Trend:

	93-94	94-95	95-96	96-97
Annual dropout rate	4.9%	4.4%	3.9%	3.3%

Historical Trend - CA:

1987-88	1996-97
*	3.3%

* This dropout rate is not comparable to 1996-97 data, since 1996-97 data represents a one-year dropout rate for grades 9 to 12, whereas 1987-88 data represents one-year dropout rate for grades 10 to 12. Nevertheless, dropout rates for 1996-97 for grades 10 to 12 only are consistent with the significant decline in the one-year dropout rates overall, from 7.8% in 1987-88 to 3.3% in 1996-97.

National Average and State Rank:
National figures are not comparable to California's dropout rate above. However, a recent analysis conducted by the National Center for Education Statistics estimated the high school completion rate of 18 through 24

year-olds for the U.S. at 85.8% between 1994 and 1996.* California ranks 51st of 51 (50 states and the District of Columbia) in this measure. In 1990-92, the earliest years for which comparable data is available, California ranked 50th of 51.

Notable Facts:

One-year dropout rates show equal improvement among most ethnic groups over the past decade. Specifically, the one-year dropout rate for Latino and African-American students declined 61% and 62%, respectively, to 4.8% and 5.0% in 1996-97 from 12.3% and 13.0% in 1987-88. The rate for White students improved 62% during this time, from 5.0% in 1987-88 to 2.2% in 1996-97. The greatest improvement (73%) was experienced by Filipinos, from 5.1% to 1.8%. Despite these improvements, the rates for Latino and African-American children remain more than twice the rate of White children and nearly three times the rate of Asian students (1.7%).

Source: "Enrollment, Graduates, Dropouts, and Staff in California Public School Districts," October 1996, Unpublished Data, California Department of Education, Education Demographics Unit; Fact Book, 1997-98: Handbook of Educational Information, California Department of Education; Digest of Educational Statistics, 1997, National Center for Education Statistics, U.S. Department of Education; Dropout Rates in the U.S., 1996, Ibid.

6. College Bound Seniors

This indicator represents the percentage of recent public and private high school graduates who go to postsecondary education in California public and independent colleges and universities.

California Trend:

	1993	1994	1995	1996
Percent	53.8%	53.2%	54.9%	53.1%*

* Percents do not include students attending independent colleges and universities or colleges out of state. In 1995, 1.9% of all high school graduates attended independent schools and colleges, while 9.3% migrated out of state to attend college.

Historical Trend - CA:

1988	1996
55.7%	53.1%

National Average:

In 1996, the college enrollment rate of high school graduates was 65%. In 1987, the college enrollment rate of high school graduates was 57%.

State Rank:

Not available.

7. Students with Limited English Proficiency

This indicator represents the percent of 1996 public school students (K-12) who were designated by their school as having limited proficiency in English.

California Trend:

	1994	1995	1996	1997
Percent	23.2%	23.8%	24.4%	24.7%

Gun-related Injuries & Fatalities
Youth Homicide

Safety

Child abuse reports increased throughout the past decade. While some of the increase may be attributed to greater awareness and reporting, the increasing number of children who have been seriously injured (not just reported for being at risk) indicates some actual rise in abuse. From 1987 to 1997, the percentage of children in foster care more than doubled: from 50,547 to 108,488. In the past decade, the budget for the state Office of Child Abuse Prevention declined in real dollars, but did receive some augmentation in recent years.

Guns claim a higher number of children's lives. They are involved in more assaults as well as deaths

Source: California Department of Social Services, Information Services Bureau; California Children's Budget, 1997-98, Children's Advocacy Institute; California Department of Health Services, Epidemiology and Prevention for Injury Control (EPIC) Branch.

1. Drug Exposed Babies

This indicator represents the prevalence of drug or alcohol use among pregnant women and the

California Trend:

No annual statewide statistics are available. The most recent and comprehensive study of the prevalence of drug exposed births remains the Perinatal Substance Exposure Study conducted through the California Department of Alcohol and Drug Programs in 1992. Through urine toxicology screening and a random sample of nearly 30,000 women, researchers estimated a statewide prevalence rate for licit or illicit drugs of 11.4%, 5.2% for drugs other than alcohol, and 3.5% for illicit drugs.

Smaller studies conducted in urban

1987 - 461 (rate = 5.5 per 100,000)

1996 - 669 (rate = 6.8 per 100,000)

Source: *Profile of Alcohol and Drug Use During Pregnancy in California*, 1992, California Department of Alcohol and Drug Programs; "Effects of Age on Substance Perinatal Abuse among Whites and African-Americans," *American Journal on Drug and Alcohol Abuse*, 23(3), pp. 431-457; Preliminary results from the 1997 National Household Survey on Drug Abuse, Department of Health and Human Services, Substance Abuse and Mental Health Services Administration, Office of Applied Studies; Preliminary Results from the 1996 National Household Survey on Drug Abuse, *Ibid.*; National Pregnancy and Health Survey, Department of Health and Human Services, National Institute of Drug Abuse; "Update: Trends in Fetal Alcohol Syndrome - United States, 1979-1993," *Morbidity and Mortality Weekly Report*, February 20, 1998, National Center for Health Statistics, Centers for Disease Control.

2. Child Abuse and Neglect

This indicator represents the number of children and rate per 1,000 children who are reported incurring abuse (sexual, physical, and emotional) and neglect.

California Trend:

	1993	1994	1995	1996
Number*	660,942	664,294	690,005	706,918
Rate per 1,000	76.9	75.8	77.5	78.2

* Some children may be reported multiple times within a year.

Historical Trend - CA:

	1987	1996
Number	370,634	706,918
Rate	49.9	78.2

National Average:

43.5 per 1,000 children in 1996. The national average is not directly comparable to California's rate. Some states, including California, count each incident of maltreatment as one report, regardless of the number of children involved. Others use a child-based system that assigns a report to each child who is alleged to be a victim of maltreatment. In 1987, the national average was 34.0 per 1,000 children.

State Rank:

In 1996, California ranked 34th of 51 (50 states and the District of Columbia).

Historical Trend - State Rank:

1990*	1996
42nd of 51	34th of 51

* Standardized data exist only back to 1990. However, California ranked 48th of 50 states in 1987 in a separate survey administered by the National Center on Child Abuse. This survey, *Highlights of the Official Aggregate Child Neglect and Abuse Reporting*, is no longer being conducted.

Source: *Preplacement Preventative Services For Children in California*, 1996, California Department of Social Services, Information Services Bureau; *Highlights of the Official Aggregate Child Neglect and Abuse Reporting*, 1987, National Center on Child Abuse and Neglect; *Child Maltreatment 1996: Reports from the States to the National Child Abuse and Neglect Data System*, Ibid.

3. Foster Care

The indicator represents the number of children and rate per 1,000 children who are in out-of-home care (which includes children in foster care and children on probation who are not in institutionalized care, such as the California Youth Authority).

California Trend:

	1994	1995	1996	1997
Welfare	86,126	91,482	93,159	102,681
Probation	5,438	5,101	4,932	5,807
Rate per 1,000	10.5	10.8	10.8	11.8

Historical Trend - CA**:

	1988	1997
Welfare	54,128	102,681
Probation	5,243	5,807
Rate per 1,000	7.2	11.8

National Average:

The national average is not directly comparable to California's rate. The most recent data indicates that 507,000 youth were in out-of-home care in December 1996. However, this number includes young people who are 18 and older, though they are less than 10% of the out-of-home population.

State Rank:

Not available.

Notable Facts:

In California, African-American children comprised 35.6% of all children in foster care in 1996, more than any other ethnic group and up from 31.8% in 1987. Yet, African-American children comprise only 7.7% of all children, ages 0-17, in California in 1996.

Source: California Department of Social Services, Information Services Bureau, FCI 520-A Report, *Selected Characteristics of Children in Foster Care*; California Department of Finance, Demographic Research Unit; U.S., Department of Health and Human Services, Administration for Children and Families, Child Bureau, Voluntary Cooperative Information Systems.

4. Incarcerated Juveniles

This indicator represents the number of juveniles in custody in public and private institutions—including the California Youth Authority, county camps and juvenile halls—and private institutions per 100,000 juveniles.

California Trend:

	1989	1991	1993	1995
Total*	653	578	595	636
Public	519	490	505	559
Private	134	87	90	76

* Public and Private rates may not add to total due to rounding.

In 1995, 21% of all juveniles in custody in the United States were incarcerated in California; over 19,000 were in public institutions administered by the state, up from 17,000 in 1993.

Historical Trend - CA:

	1985	1995
Total	543	636
Public	430	559
Private	113	76

National Average:

In 1995, 381 juveniles per 100,000 were in custody nationally. This rate represents a 22% increase from 1985 when there were 313 juveniles in custody per 100,000 in the population. The rate of incarceration of juveniles in private facilities has increased by 9% (128 to 140), since 1985.

Notable Facts:

The total rate of youth incarceration for all races increased between 1985 and 1995, from 176 to 250 youths incarcerated per 100,000. During this time, the number of Latino children, ages 0-17, in California grew by 25%, from 7.1 million to 8.9 million. The incarceration rate increased the most for Latino youth, from 157 to 282 per 100,000 (a 79% increase). African-American youth continue to be incarcerated at the highest rate, from 662 in 1985 to 929 per 100,000 in 1995 (a 45% increase).

State Rank:

In 1995, California ranked 50th of 51 (50 states and the District of Columbia).

Historical Trend - State Rank*:

1985	1995
49th of 50	50th of 51

* Due to the transfer from state to state of juveniles in private facilities, this ranking is based on juveniles in detention in public facilities only. This ranking is therefore more representative of the state resident juvenile population in custody.

5. Gun-related Injuries & Fatalities

This indicator represents the number and rate per 100,000 of fatalities and injuries to children from firearms.

Ages 0 to 17

This indicator represents the number and rate per 100,000 of fatalities and injuries to children under 18 years of age from firearms.

California Trend:

	1993	1994	1995	1996
Deaths	514	471	488	358
Injuries	1,634	1,507	1,393	1,112
Rate (Deaths and Injuries) per 100,000	25.3	22.6	21.1	16.2

Historical Trend - CA:

	1987	1996
Deaths	252	358
Injuries	*	1,112
Rate (Deaths and Injuries) per 100,000	*	16.2

* Gun-related hospitalization data is not distinguishable prior to 1991. In that year there were 478 gun-related fatalities and 1,721 non-fatal gun-related hospitalization in California, for a rate of 27.1 gun-related fatalities and injuries per 100,000 children, ages 0-17.

Ages 0 to 19

This indicator represents the number and rate per 100,000 of fatalities and injuries to children under 20 years of age from firearms.

California Trend:

	1993	1994	1995	1996
Deaths	901	887	850	669
Injuries	2,852	2,533	2,400	1,921
Rate (Deaths and Injuries) per 100,000	39.9	35.7	33.5	26.3

Historical Trend - CA:

	1987	1996
Deaths	461	669
Injuries	*	1,921
Rate (Deaths and Injuries) per 100,000	*	26.3

* Gun-related hospitalization data is not distinguishable prior to 1991. In that year there were 903 gun-related fatalities and 2876 non-fatal gun related hospitalization in California, 42 per 100,000 young persons, ages 0-19.

National Average:

In 1995, 5,285 young persons, ages 0-19, died in gun-related violence, a rate of 7.0 per 100,000. This figure shows a significant increase from 1986 when 3,373 gun-related deaths of young persons, ages 0-19, were recorded, a rate of 4.8 per 100,000.

Additionally, an estimated 41,566 young people, ages 0-24, were non-fatally injured in gun violence in 1995. This figure represents nearly half (49.4%) of all gun-related non-fatal injuries.

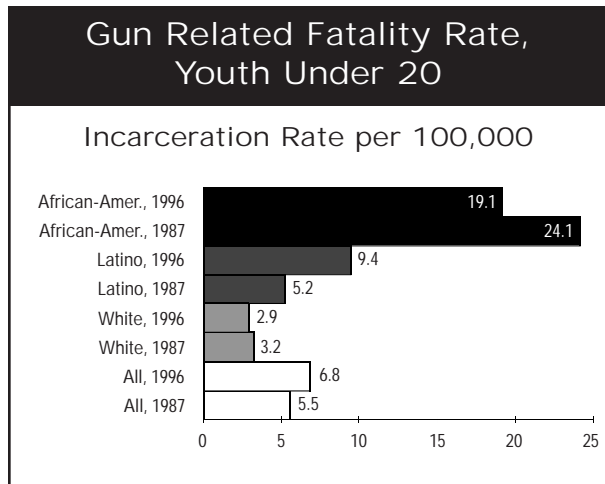

State Rank:

In 1995, California ranked 38th of 51 (50 states and the District of Columbia).*

Historical Trend - State Rank:

1986	1995
41st of 51	38th of 51

* States ranked with respect to gun-related death rate per 100,000 young persons (0-19) in population.

Notable Facts:

Although gun-related deaths among children have declined in recent years, total fatalities and rate per 100,000 children and youths remain higher than a decade ago. In 1987, gun-related fatality rates for children, ages 0-17, and youths, ages 0-19, was 3.4 and 5.5 respectively. In 1996 these rates increased to 4.0 and 6.8 respectively. Moreover, California has experienced a sharp increase in the fatality rate for Latino youth over this period. In 1987, the Latino gun-related fatality rate was 2.9 per 100,000 Latino children, ages 0-17. In 1996, this rate more than doubled to 5.4. During this period, the rate for African-American children declined from 13.9 to 10.0, yet still remained five times the rate for White children (1.8). In addition, the non-fatal gun violence rate for African-American children, ages 0-17, is 66 per 100,000 children, nearly ten times the rate for White children (6.7) and over twice the rate for Latino children (29.9).

Source: California Department of Health Services, Epidemiology and Prevention for Injury Control Branch; Mortality Data, National Center for Health Statistics, Centers for Disease Control.

6. Youth Homicide

The indicator represents the number of homicide victims under age 20 and the homicide rate per 100,000 young people under age 20.

California Trend:

	1993	1994	1995	1996
Number	857	824	832	680
Rate per 100,000	9.2	9.2	9.1	6.9

Historical Trend - CA:

	1987	1996
Number	441	680
Rate	5.3	6.9

National Average:

A total of 3,345 young people of known age under 20 were victims of homicide crime in 1996 (4.4 per 100,000). Of this total, two-thirds (67%) involved the use of a firearm. In 1987, 3.5 per 100,000 youths, a total of 2,411 persons (53% involving firearms), in the U.S. were victims of homicidal crime.

State Rank:

In 1996, California ranked 45th of 48 states.

Historical Trend - State Rank:

1987	1996
47th of 50	45th of 48

Youth Homicides caused by firearms, 1996 vs. 1987

Notable Facts:

The increase in gun violence involving Latino children has carried over to an increase in Latino youth homicide rates. In 1987, 5.0 per 100,000 Latino youths, ages 0-19, were victims of homicidal crime, twice the rate of White youths (2.2) and considerably less than the rate for African-American youth (27.3). In 1996, the youth homicide rate for White youth was about the same (2.1), while the rate for Latino youth increased to 10.4. During this time the rate for African-American youth declined to 20.0, yet remains ten times the rate for White youth and twice the rate for Latino youth.*

* Rate for Asian youth and other ethnic groups not available.

Source: California Department of Justice Criminal Justice Statistics Center; 1993 Series Population Projections, California Department of Finance, Demographic Research Unit; 1996 Supplementary Homicide Report, Victims by Age, Sex, Race, State, and for U.S., U.S. Department of Justice, Federal Bureau of Investigations, Criminal Justice Information Services Division; Resident Population of the United States: Estimates by Age, Sex and Race, U.S. Department of Commerce, Bureau of the Census, Population Division.

County Tables

California County Highlights

Family Economics

- * The state's healthy economy, along with changes to the welfare program, have combined to reduce the number of families receiving public assistance. Between 1996 and 1997, the number of children receiving public assistance declined by 16%.
- * While more families are transitioning off welfare, the number of low-income children continues to grow. Between the 1996-97 and 1997-98 school years, 34 of the 58 California counties saw an increase in eligibility for free or reduced school meals among children enrolled in public education. In nearly one-third (18) of the counties, 50% or more of the students were eligible for subsidized school meals.

Health

- * The teen birth rate continued to fall in the most recent year of available data. Statewide from 1995 to 1996, the rate fell from 67 births per 1,000 teenage women to 62; the rate fell in 51 of the 58 counties.
- * The percent of low birthweight infants has not improved from a year ago; in over one third of the 58 counties, the rate increased.
- * Although the state's infant mortality rate has improved in recent years, between 1995 and 1996, the rate increased in 23 of the 58 counties.
- * The proportion of infants born to women who received late or no prenatal care

improved between 1995 and 1996, from 5.2% to 3.8%. Yet, 5 counties have more than twice the statewide average. Additionally, in 21 counties, the proportion of women receiving late or no prenatal care in 1996 is equal to or greater than 5.2%, the 1995 national average.

Education

- * The one-year dropout rate among high school students continues to improve, declining in over two-thirds of California counties. Nine counties saw the proportion of high school dropouts decline by more than one percentage point, with San Bernardino and Shasta both experiencing a decline of 1.4% in their high school dropout rate, the largest among all counties.
- * Average classroom size improved in 57 of the 58 counties; statewide, the average class size declined from 29.1 to 27.4.

Safety

- * Between 1995 and 1996, the rate of child abuse and neglect reports per 1,000 children increased statewide and in 24 of the 58 counties.
- * The number of children in foster care per 1,000 children increased in 37 of the 58 California counties between 1996 and 1997; the average months a foster care child is in out-of-home placement increased in 32 of the 58 counties in 1997.

California: The State of Our Children 1998 also reflects the efforts of all Children Now staff. Amy Dominguez-Arms and Geovanny Fernandez wrote the report. Geovanny was the principal researcher and Amy provided project direction and was the principal editor. Lois Salisbury contributed to the overall development of concepts. Dante Allen, Michael Burgmaier, Larisa Casillas, Patricia Freeman, Vernae Graham, Joan Lapp, and Jessica Reich edited the report. Jand Davallou, Katie Krey, and Heidi Taam proofread

Children Now is a nonprofit, independent voice for children, working to translate the nation's commitment to children and families into action.

Children Now combines policy expertise and up-to-date information on children with communication strategies to reach parents, lawmakers, citizens, business, media and community leaders to generate positive change on behalf of children.

With particular concern for those who are poor or at risk, Children Now is committed to improving conditions for all children. Founded in 1988, Children Now is a national organization with special depth in California.
