INTRODUCTION

The U.S.-Mexico border region is an area of incredible natural beauty, scarce hydrological resources, and burgeoning metropolitan areas. In the past decade, the North American Free Trade Agreement has sparked new business growth and more industries have opened plants near the border. This increase in border commerce has increased cross-border traffic and, in turn, the potential for chemical spills.

Chemical emergencies do not respect international boundaries. In 1983, in La Paz, Baja California, the United States and Mexico signed the Agreement on Cooperation for the Protection and Improvement of the Environment in the Border Area, otherwise known as the “La Paz Agreement” or the “1983 Border Environmental Agreement.” This document established a framework for cooperation between the two countries to prevent, reduce, and eliminate sources of air, water, and land pollution in the zone extending 100 kilometers along each side of the international boundary. Since the establishment of the La Paz Agreement, the United States and Mexico have collaborated on efforts to protect the health and environment of border communities.

In 1988, the Joint U.S.-Mexico Contingency Plan was developed to provide a framework for cooperation between the United States and Mexico to respond to a polluting incident that may pose a significant threat to both parties or that affects one party to such an extent as to justify warning the other party or asking for assistance. This plan was revised and signed in June 1999 in order to reflect legislative, regulatory, policy, and procedural changes within the countries.

KEY DECISION POINTS AND DOCUMENTS

August 1983	La Paz Agreement — <i>Established cooperation for the protection and improvement of the environment in the border area.</i>
January 1988	U.S. – Mexico Joint Contingency Plan for Accidental Releases of Hazardous Substances Along the Border — <i>Provides a framework for cooperation between the United States and Mexico to respond to incidents that may pose a significant threat to both parties.</i>
October 1996	Border XXI Plan, Framework Document — <i>Addresses the most challenging environmental and human health problems in the border region while promoting sustainable development.</i>
October 1996	Border XXI Work Plan— <i>A comprehensive planning program aimed at both defining and implementing a shared binational vision for the future promoting environmental protection and sustainable development.</i>
June 1999	Joint United States Mexico Contingency Plan (replaces 1988 Contingency Plan)
March 2003	Border 2012 Program Document— <i>Protects public health and the environment in the U.S.-Mexico border region consistent with the principles of sustainable development through partnerships among Federal, state, local and U.S. tribal governments.</i>

The Border XXI Program, initiated in 1996, was a five-year plan for addressing the most challenging environmental and human health problems in the region. The goal of Border XXI was to promote sustainable development in the border region by seeking a balance among social and economic factors and the protection of the environment in border communities and natural areas. The governments of the United States and Mexico sought to advance the concept of sustainable development by finding ways to assist border communities in their decision-making processes, including providing information, financial assistance, and opportunities to exchange ideas among the various stakeholders. The two countries are currently working on a new border plan, “Border 2012 U.S.-Mexico Environmental Program,” which is to be published in March 2003.

A critical element of the U.S.-Mexico border cooperation program is the development of sister city partnerships between municipalities in the United States and Mexico. Sister cities are building confidence along the U.S.-Mexico border by planning to help each other when there is an emergency on either side of the border. Plans call for police, fire, paramedics, and other personnel from both sides of the border to respond quickly to large fires, dangerous chemical spills, or other emergencies. The plans also address preparedness issues including: hazard identification; pollution prevention; risk reduction; training; exercises; and equipment. The first sister city emergency plan was signed in 1997 with Brownsville, Texas, and Matamoros, Tamaulipas, Mexico. Currently, there are ten contingency plans in place along a booming border area to ensure adequate response for large-scale emergencies. Six other pairs of sister cities also are working on plans along the 2,000-mile border that spreads from the Gulf of Mexico to the Pacific Ocean.

The purpose of the *Semiannual Report on United States-Mexico Border Contingency Planning Activities* is to consolidate information on U.S.-Mexico border joint response and contingency planning efforts by U.S. EPA Regions, border states, and sister cities in order to promote the exchange of information, communication, and coordination among these groups. The types of U.S. and binational activities presented in this report include efforts such as developing Sister City Plans, response exercises, training courses, and responses to actual hazardous material and environmental incidents. Essential documents, Web sites, and contact information also make this report a useful reference document. Updates are published twice a year by the U.S. EPA's Chemical Emergency Preparedness and Prevention Office (CEPPO).

CEPPO provides leadership, advocacy, and assistance to:

- Prevent and prepare for hazardous material (Hazmat) emergencies;
- Respond to environmental crisis; and
- Inform the public about chemical hazards in their community.

To protect human health and the environment, CEPPO develops, implements, and coordinates regulatory and non-regulatory programs. The office carries out this work in partnership with U.S. EPA Regional Offices, domestic and international organizations in the public and private sector, and the general public.

In order to protect human health and the environment throughout the United States and along the borders, CEPPO administers programs jointly with Canada and Mexico to prepare for and prevent chemical emergencies along the northern and southern borders of the United States. Each of these three countries organizes its efforts according to its government structure. For the United States, CEPPO depends primarily on the support of the respective EPA regions, the border states, and the local communities. Additional support is provided by other agencies, such as the U.S. Coast Guard and the U.S. Federal Emergency Management Administration.

NEWS, ALERTS, AND UPCOMING EVENTS

U.S.—MEXICO JOINT RESPONSE TEAM MEETING

The Joint Response Team (JRT) met on May 13-14, 2002, in Brownsville, Texas. Key topics discussed during the meeting were: communications; plans for future training and exercises in Sister Cities; language to address terrorist threats in the Sister City Plans; funding for JRT projects; and continuing work on plans with prospective sister cities. The sessions were held in Spanish and English and simultaneous interpretation was provided.

National Coordinators Meeting

The National Coordinators of the La Paz Agreement will hold a meeting in conjunction with the completion and signing of the New Border 2012 Plan. During this meeting the various workgroups under the La Paz Agreement and New Border 2012 Plan, including the Joint Response Team, will meet to discuss the future directions of their programs and develop a work plan for the coming year. The meeting will be held in the border area in the Spring of 2003. The place and exact date have not yet been determined.

Border 2012 U.S. - Mexico Environmental Program

The comment period for the new border plan has recently been completed and the plan is scheduled to be published in March of 2003. The mission of the new border plan is to protect public health and the environment in the U.S.-Mexico border region consistent with the principles of sustainable development through partnerships among Federal, state, local and U.S. tribal governments.

The new border plan includes goal and objectives for various border programs, including contingency planning and emergency response. The goal and objectives are included below. It should be noted that while the new border plan has not been signed by the two countries, based on public comments received to date, the final language of the goal and objectives for the contingency planning and emergency response program should not substantially change from the language in the draft plan.

Goal #5: Reduce exposure to chemicals as a result of accidental chemical releases and/or deliberate acts of terrorism

Objective 1: By 2004, have a clearly established chemical emergency advisory/notification mechanisms between Mexico and the United States.

Objective 2: By 2008, have all 14 sister cities joint contingency plans in place and operating (including exercises), with the establishment of binational committees for chemical emergency prevention (or similar border forums).

Objective 3: By 2012, 50 percent of sister city joint contingency plans would have been supplemented with preparedness and prevention related efforts, such as risk and consequence analysis, risk reduction, and counter-terrorism.

FIRST BIOTERRORISM FIELD EXERCISE AND TABLETOP EXERCISE ALONG THE BORDER

Overview

On September 5 and 6, 2002, U.S. EPA coordinated a border exercise in Eagle Pass/Piedras Negras to test the effectiveness of the area's joint emergency response planning. This was the first Sister City exercise involving a biological threat, and the first time a Native American Tribe partnered in a border exercise. The bioterrorism exercise included a four-hour tabletop exercise held in Eagle Pass, Texas, on the Kickapoo Indian Reservation. Planning for the exercise began when the Agency for Toxic Substances and Disease Registry (ATSDR), which is co-located with U.S. EPA Region VI was invited to participate with U.S. EPA.

The U.S. EPA Binational Bioterrorism Table Top Exercise was held on September 5 as part of the week-long hazardous materials exercise. The table-top exercise was facilitated by Miguel Trevino. Enrique Delgado facilitated the simulation of biological agents. The table top exercise simulated a release of a biological agent of sufficient magnitude and consequence as to engage state and Federal responses from both sides of the border. The bioterrorism scenario revolved around a terrorist driving a large truck carrying illegal aliens exposed to a biological agent destined for the United States. The truck was to collide with a train loaded with chemicals. The first responders (fire, emergency medical services (EMS), Red Cross) from both the United States and Mexico would have been exposed to the biological agent and would expose citizens from both countries including the members of the Kickapoo Reservation. Initially, 40 to 50 people would become symptomatic; however, there was an escalation in the first 24-hours where several hundred people became sick. Signs and symptoms increased in severity, and fatalities occurred. The biological agent was not divulged to better simulate the necessary actions required during the exercise. The main objective of such a scenario was to orient the participants to the likelihood of a biological incident in this community and the importance of coordination. Actions were focused on the local response for the Public Health and Medical Communities.

Goals of Exercise

The goals of the bioterrorism exercise were:

- To identify the outbreak, diagnosis, containment, and treatment;
- To identify areas for improvement; and
- To bring together the local, state, and Federal agencies of the two nations to encourage networking and establishment of new contacts and resources.

It was anticipated that, as a result of the exercise, the local participants would have a better appreciation as to whether existing local emergency response plans were adequate to address a bioterrorism attack. The exercise also emphasized the importance of developing a bioterrorism response plan.

Participants

Participants in this Bioterrorism Tabletop Exercise included representatives from the Kickapoo Nation and local responders from Eagle Pass, Texas, and Piedras Negras, Coahuila, Mexico. Also in attendance were:

- Dr. Lillian-Riveria Rodriguez, Secretaria de Salud/Dirección General de Servicios Escolares (Secretary of Health/ Department of Scholastic Services)
- Ms. Debbie Dietrich, Co-Chair of the Joint Response Team for the U.S.;
- Rocio Sarmiento Torres, Co-Chair of the Joint Response Team for Mexico;
- Mr. Myron Knudson, Director Superfund Division of EPA Region VI;
- Dr. J. Rawlings, Texas Department of Health;

- Captain Enrique Delgado, Health and Human Services Region VI;
- Commander K. Meeks, Indian Health Service Area Office;
- Lieutenant Commander Patrick Young, Agency for Toxic Substances and Disease Registry, RegionVI;
- Bob Hendrix, Federal Emergency Management Agency Region 6; and
- Dr. Miguel Trevino, Quimica Fluor, S.A. de C.V.

New Considerations That Came out of the Exercise/Tabletop

During this exercise many regional issues were addressed. Some issues that emerged during the exercise include:

- The need for a coordinated plan for local hospitals and public health and emergency response personnel within Eagle Pass, Piedras Negras, and the Kickapoo Indian Nation;
- The need for coordination among the state and local communities regarding resource availability and the sharing of these resources;
- The possible need to adopt a Metropolitan Medical Response System plan as this particular border community population approaches 160,000; and
- The need to make local health agencies more aware of existing emergency response structures.

Since this exercise, another bioterrorism exercise was held and similar exercises are planned in the future. See Exercises section on page 13.

OPERATION: BORDER SAFEGUARD

The large metropolitan center of Mexicali, Mexico and the border gateway town of Calexico, Imperial County, California, sit next to each other with only a canal of water to demarcate an international border. The life, health, and vibrancy of the two communities are intimately interrelated. Of economic and social importance to both communities are the businesses along the border, especially the trucking companies that move commodities through the U.S. and Mexican Customs' ports. Any disruption to the trucking lanes or to the Customs' Ports impacts the communities and commerce of both countries on Dec. 12, 2002. U.S. EPA and the Mexican Procuraduria Federal de Proteccion al Ambiente (PROFEPA) cooperated to simulate a port disruption in order to prevent or minimize the consequences of a real event in the future.

The simulation *Operation: Border Safeguard* involved a hazardous materials release scenario that allowed for Binational local, state, and Federal resources to support each other during a full-scale exercise. While *Operation: Border Safeguard* was the main event, U.S. EPA also conducted a variety of emergency response training and participated in associated table top exercises and evaluation sessions.

For PROFEPA, *Operation: Border Safeguard* was an essential component of a "Safety, Health and Environmental Protection" week it hosted in Mexicali. Imperial County and Mexicali currently support each other under a Mutual Aid Agreement, part of which calls for exercises with binational support. Imperial County agencies decided to take advantage of *Operation: Border Safeguard* to not only provide cross border mutual aid, but also to stage a parallel incident on the U.S. side of the border. U.S. Customs joined in by offering their facility as an exercise site and seized the opportunity to strengthen their own preparedness procedures.

Insights gained for improved preparedness and response protocols from *Operation: Border Safeguard*, will ideally be woven into a Binational Prevention and Emergency Response Plan between Imperial County and the City of Mexicali. Sister City Planning in the Imperial County/Mexicali region is an U.S. EPA Region 9 priority and this exercise and training activities helped fortify the binational cooperation needed for initiating plan development. It also highlighted the need for better cooperation between the Mexicali Fire Department, Proteccion Civil, and PROFEPA.

U.S. EPA worked closely with numerous and highly dedicated governmental officials to develop and conduct *Operation: Border Safeguard*. Key participants include representatives from city and county fire departments, state and Municipal Proteccion Civil, Federal and state PROFEPA, health services, Offices of Emergency Services from Imperial County and Mexicali, Mexican and U.S. Customs, Immigration and Naturalization Services, California Highway Patrol and Mexicali Police, the Mexican Army, and California's Department of Toxic Substances Control. Two of the exercise evaluators came from San Diego County Environmental Health Department.

Planning the Exercise

For a large scale binational event, requiring significant resources and coordination, it was important that all of the involved agencies be able to meet their own objectives related to the safety and security of the border in the event of a hazardous substance release. With this in mind, the multi-agency Exercise Design Team agreed upon two general exercise goals and ten objectives.

Goals

- Activate a binational, multi-agency emergency response between Imperial County and Mexicali; and
- Be better prepared to respond to a terrorist-related event involving hazardous materials at the U.S.-Mexican Border.

Objectives

- **Activate the 2002 Imperial County-Mexicali Mutual Aid Agreement.** This field tested the recently signed Mexicali-Imperial County pledge of cooperation.
- **Coordinate international, federal, state and local agency response protocol.** Exercise training under non-emergency conditions helped responders get to know each other and work together in preparation for a real incident. Changes and needs for improvement areas can be identified and resolved now.

- **Make appropriate notifications.** Binational agreements and Federal and state notification requirements need testing. Making all required notifications and doing so immediately, initiates critical response procedures to task personnel and provide technical assistance and resources.
- **Use of the Incident Command System.** The ICS was used on both sides of the border. Agreeing to standardize response operations and being prepared to activate the system requires training and field testing.
- **Mobilize U.S. resources into Mexico.** Trained local Hazmat Team personnel and their equipment crossed the border. Crossing the border safely and quickly in an emergency situation is important. State and Federal resources also may be requested to provide local and/or cross border mutual aid. Under the U.S.-Mexico Joint Contingency Plan (JCP), there are situations where the U.S. EPA may cross into Mexico to respond to a Hazardous Materials spill and/or provide technical assistance.
- **Activate the U.S. Customs Emergency Response Plan.** The plan was tested with a hazardous materials and terror-related incident. Evaluating the Plan's effectiveness during and after the Exercise is helping Customs to improve its operations and make appropriate Plan revisions.
- **Respond to a terrorist-related incident.** A terrorist-related incident requires expanded training, resources, and coordination. It requires participation of the FBI and related law enforcement not normally involved in the response to an accidental release.
- **Incorporate law enforcement into the ICS.** Response Teams and law enforcement personnel partnered together.
- **Obtain required resources to assess and mitigate hazards.** Resources (local, state, Federal and binational) were requested, coordinated, shared, and integrated into the response activities. U.S.EPA On-Scene Coordinator (OSC) assistance was requested by the U.S. Incident Commander and the duty OSC from Region 9 was deployed.
- **Communicate with other agencies, especially across the International Border.** Effective communication and the use of various types of equipment and transborder frequencies, in two languages, was practiced between the two countries and among the numerous, domestic agencies involved.

As the planning progressed, various agencies used the final scenario situation as a guide to evaluate their own internal notification and response procedures, obtain additional training, and discuss mutual aid protocols.

In preparation for the full-scale exercise, two separate tabletop exercises were held during the preceding week. PROFEPA hosted a tabletop exercise for the Mexican responders and government officials in Mexicali, and U.S. Customs/Imperial County hosted a tabletop for U.S. responders and customs personnel. These tabletops were held on different days so that agency representatives from both countries could attend or participate in both tabletops.

Exercise Evaluation

On Thursday, December 12, 2002 an exercise evaluation of the activities on the U.S. side was conducted. A Player's Exercise Critique Form and facilitated discussion helped determine whether plans, procedures, and resources used during the exercise were adequate, whether there was sufficient and timely information to carry out responsibilities, and whether exercise objectives were met. The evaluations will help identify what future training and equipment are needed, and where our plans and protocols need improvement. A written After Action Report is being developed.

The exercise scenario focused on a truck carrying weaponized chemicals which tried to illegally enter the U.S. at the Calexico Port of Entry. U.S. Customs discovered that the driver was part of a terrorist-related plan to bring a weapon into the country. The driver saw that his illicit plan could not work and tried to drive away. In his haste, the truck overturned and spilled the chemicals in the Custom's compound. The Imperial County Hazmat Team suited up to respond to the overturned truck.

 Plan Signed

 Activity In Progress

ACTIVITY UPDATE: SISTER CITY PLANS

Completed Since Last Issue:

October 19, 2001

Del Rio, Texas, and Ciudad Acuna, Coahuila

A Sister City Plan was developed cooperatively between the communities of Del Rio, Texas, and Ciudad Acuna, Coahuila. The Sister City Plan was signed by the Mayors of each city at the Lake Amistad Dam on October 19, 2001, and the plan was registered with Secetaria de Relaciones Exteriores (SRE), the Ministry of Foreign Affairs, Mexico City.

November 9, 2001

Douglas, Arizona and Agua Prieta, Sonora

A Binational Prevention and Emergency Response Plan Between Douglas, Arizona and Agua Prieta, Sonora was signed November 9, 2001.

May 13-14, 2002

Brownsville, Texas, and Matamoros, Tamaulipas

The Joint Response Team (JRT) met on May 13-14, 2002, in Brownsville, Texas. The meeting opened with a special signing of the update to the Brownsville/Matamoros Sister City Plan and a welcome by Blanca Vela, Mayor of Brownsville, and Mario Zolezzi, Mayor for Matamoros.

October 4, 2002

Cochise County, Arizona and Naco, Sonora

A Binational Prevention and Emergency Response Plan Between Cochise County, Arizona and Naco, Sonora was signed on October 4, 2002.

November 21, 2002

Columbus, New Mexico, and Las Palomas, Chihuahua

The Sister City Plan for Columbus, New Mexico, and Las Palomas, Chihuahua, was signed November 21, 2002.

Plans In Progress or Outstanding:

December 11, 2002

City and County of San Diego, California and, Tijuana, Baja California

A second draft of the Binational Prevention and Emergency Response Plan Between the City/County of San Diego, California and the City of Tijuana, Baja California has been developed.

Early 2003

El Paso, Texas, and Ciudad Juarez, Chihuahua

Planning efforts are continuing for the development and signing of the Sister City Plan for El Paso, Texas, and Ciudad Juarez, Chihuahua. The Mayors of both communities are in favor of the plan and progress is being made within the fire departments of each city. A signing is anticipated in early 2003.

2003

Weslaco, Texas, and Rio Bravo-Progresso Norte, Tamaulipas

A final draft of a Sister City Plan for Weslaco, Texas, and Rio Bravo/Progresso Norte, Tamaulipas has been completed. The Mayors of both communities are in favor of the plan and a signing is pending.

2002-2003

Presidio, Texas and Ojinaga, Chihuahua

Continuing to develop the Sister City Plan for Presidio, Texas/ Ojinaga, Chihuahua.

ACTIVITY UPDATE: EXERCISES

Conducted Since Last Issue:

September 5-6, 2002

Eagle Pass, Texas, and Piedras Negras, Coahuila—Bioterrorism Exercise

Bioterrorism exercise; see article on page 6.

September 20, 2002

Santa Cruz County, California and Nogales Sonora—Table Top Exercise

An all day Table Top Exercise was conducted for the Santa Cruz County LEPC and Nogales, Sonora agencies. A total of 74 personnel from 31 agencies and departments representing Federal, state, county, military, and Mexican agencies attended. The purpose of the exercise was to provide participants with an opportunity to evaluate current response concepts, plans, and capabilities for response to an explosion and chemical terrorist event in Santa Cruz County. The exercise focused on key local emergency responder coordination, critical decision making, and the integration of state and Federal assets necessary to save lives and protect the public health following a terrorist event. The scenario involved a Mexican “Crucero” Tour Bus, a U-haul and a High School bus at a Border Patrol Checkpoint 14 miles north of the Point of Entry.

December 12, 2002

Imperial County, California and Mexicali, Baja California—“Operation: Border Safeguard”

Chemical and Terrorist-Related Exercise; see article on page 8.

Exercise Preparations in Progress:

February 25, 2003

U.S.-Mexico Marine Contingency Plan Exercise

U.S.EPA will participate in the activation of emergency response protocol when the U.S. Coast Guard and the Second Mexican Naval Zone conduct a Table Top Exercise in Ensenada, Baja California, Mexico on February 25th. The Sister City Steering Committee will be observers and many will take part in the play as well as the evaluation. On February 26th, the U.S. and Mexico will sign a MEXUSPAC Annex of the MEXUSPLAN, a formal cooperative agreement between the two countries in the event of an oil or Hazmat spill in the marine environment.

Spring 2003

Other Sister Cities: McAllen, Laredo, Eagle Pass, and El Paso, Texas—Bioterrorism Exercises

U.S. EPA plans to work with the Agency for Toxic Substances and Disease Registry (ATSDR) to continue this series of bioterrorism exercises in the following cities along the U.S.-Mexican border in: McAllen, Laredo, Eagle Pass, and El Paso, Texas.

ACTIVITY UPDATE: TRAINING

Conducted Since Last Issue:

October 15-18, 2001

Eagle Pass, Texas, and Piedras Negras, Coahuila—Hazardous Materials Workshop

Ninety certificates of completion were presented for a hazardous material workshop for first responders conducted in Piedras Negras, Mexico. The class was presented primarily in Spanish with no simultaneous English to Spanish interpretation.

November 7-8, 2001

Brownsville, Texas, and Matamoros, Tamaulipas—Field Operations Guide (FOG) Course

Sixty-three certificates of completion were presented for the Field Operations Guide (FOG) course conducted in Spanish in Matamoros, Mexico. The FOG course was a presentation of the incident and unified command systems utilized by U.S. EPA.

December 5-6, 2001

Brownsville, Texas, and Matamoros, Tamaulipas—Hazardous Materials and Radiological Response Course

A presentation by Weapons of Mass Destruction /Civilian Support Team (WMD/CST) members was conducted for hazardous materials and radiological response in English and Spanish at the University of Texas in Brownsville, Texas. There were 40 attendees in the English session and 25 attendees in the Spanish session.

April 2-4, 2002

Del Rio, Texas, and Ciudad Acuna, Coahuila—Hazardous Materials Workshop

One hundred and forty-one certificates of completion were presented for a hazardous materials workshop for first responders conducted at the Teatro Solidaridad Auditorium in Ciudad Acuza. The class was presented primarily in Spanish with no simultaneous English to Spanish interpretation.

June 11-12, 2002

Laredo, Texas, and Nuevo Laredo, Tamaulipas—FOG Course

Sixty-three certificates of completion were presented for a presentation of the FOG course that was conducted in Spanish in Nuevo Laredo, Mexico. The FOG course was a presentation of the Incident and Unified Command Systems utilized by U.S. EPA.

September 2001 and September 2002

Continuing Challenge Training and Conference

Region 9 provided invitational travel and conference registration for 20 local emergency responders from agencies at the U.S.-Mexico Border.

September 2-4, 2002

Eagle Pass, Texas, and Piedras Negras, Coahuila—FOG Course

Seventy-four certificates of completion were given for a presentation of the FOG course that was conducted in Spanish in Piedras Negras, Mexico. The FOG course is a presentation of the Incident and Unified Command Systems utilized by U.S. EPA.

October 21-22, 2002

Brownsville, Texas, Incident Command System/Unified Command System Training

In response to the South Padre Island mishap where a barge destroyed a bridge last year resulting in mass confusion, a two-day workshop was held on the Incident Command System/Unified Command System. ICS/UCS training was held in Cameron and Hidalgo counties of Texas. This activity was coordinated with the Division of Emergency Management from the state of Texas to include local public officials, police, fire, and medical services, Federal customs inspectors, and the Texas Department of Public Safety Officers. The workshop was conducted at South Padre Island Convention Center on October 21-22, 2002.

December 2002

Mexicali, Baja California—Hazardous Materials Awareness and Response Course

U.S. EPA provided two days of Spanish language, Hazmat awareness classes in Mexicali as part of PROFEPA's "Safety, Health and Environmental Protection Week" during December 2002. The classes were geared for local responders and health care workers who may need to identify and safely respond to hazardous materials as part of their professional duties. The classes were also opened to workers, industry personnel and educators who wanted to be more aware of the chemicals that are transported through their communities and/or are used by many local Mexicali businesses.

December 2002

Mexicali, Baja California—Incident Command System Course

The "Operation: Border Safeguard" Exercise Design Team agreed that utilizing the Incident Command System (ICS) would be an essential objective of the exercise. To be better prepared, local Mexican emergency responders requested an additional two-day Spanish language course on ICS just prior to the exercise. U.S. EPA agreed to provide this additional course and deliver it in Mexicali. Imperial County Fire offered to host a shorter, three-hour English-language ICS overview at the U.S. Customs building for customs agents, law enforcement, and other U.S. responders who wanted to learn ICS or refresh their skills.

Training Planned:

January 28-30, 2003

Arizona and Sonora—U.S.-Mexico Border Tire Pile Project Audit Training

To kickoff the field work portion of the Tire Pile Project (see page 16), Region 9 has developed and is scheduled to conduct a three-day Audit Training in English and Spanish. The course will include one day in the classroom and two days in the field, where the Project Team will implement the Audit Protocol and conduct pilot audits at Arizona and Sonora waste tire sites.

September 2003

Sacramento, California—Continuing Challenge Hazmat Training and Conference

Region 9 will sponsor up to 20 emergency responders to attend this conference hosting nearly 1,000 emergency responders and planners.

TBD

Laredo, McAllen, Eagle Pass, and El Paso, Texas—Seminars on Available Technical Assistance for Bioterrorism Exercises on Weapons of Mass Destruction

Logistics are being planned by EPA for four one-day seminars to be held in Laredo, McAllen, Eagle Pass, and El Paso, Texas. The objective of these seminars are to provide up-to-date information on available technical assistance for bioterrorism exercises on weapons of mass destruction (WMD), biological, chemical, and nuclear exposures. These courses will be taught by the WMD/CST teams from the state of Texas.

TBD

El Paso, Texas—Week of Training and International Exercises

A week of training and international exercises is planned for next year at a site yet to be determined (potentially in El Paso, Texas, after the signing of their Sister City Plan with Ciudad Juarez, Chihuahua, Mexico). This training will include Incident Command System, site characterization for first responders, personal protection, equipment, decontamination, and National Response System/Protection Civil Systems training for officials and responders in the respective cities.

TBD

Brownsville, McAllen, Laredo, and Eagle Pass, Texas—Spanish "Be Prepared" Brochure

Plans are underway to distribute a Spanish "Be Prepared" brochure for shelter-in-place and evacuation for school children along the border. This brochure, which will be distributed to the border cities, provides an introduction to safety issues for hazardous materials and dangerous substances. U.S. EPA has a ten-minute video for this "Be Prepared" brochure that will be provided to the school systems for fire week activities.

ACTIVITY UPDATE: HAZARD ASSESSMENT

Conducted Since Last Issue:

March 2002

Eagle Pass, Texas, and Piedras Negras, Coahuila—Hazardous Materials CFS

A hazardous materials commodity flow study (CFS) was conducted for the City of Eagle Pass, Texas. This CFS included: inspection of transport commercial truck traffic carrying hazardous commodities entering and leaving the United States by way of the Camino Real Bridge in Eagle Pass; fixed facility inspections and analysis; and risk and vulnerability analysis of the commodities of concern for the fixed facilities and major truck transportation routes. The final report was completed on March 2002.

April 2002

Brownsville, Texas, and Matamoros, Tamaulipas—Hazardous Materials CFS

A hazardous material CFS was conducted in Cameron County, Texas. This CFS included an inspection of inbound and outbound commercial truck traffic carrying hazardous commodities at the Veteran's International Bridge in Brownsville, Texas, and inbound traffic at the Los Indios Free Trade Bridge in Los Indios, Tamaulipas, Mexico. Truck inspections involved an examination of compliance with transportation regulations, including insurance documentation and vehicle condition. Tier II Reports provided the basis for a fixed facility analysis and a risk and vulnerability critique for human receptors in the vicinity of principal transport routes. The final report was completed in April 2002.

May 2002 - January 2003

Arizona, California, Sonora, and Baja California— U.S.-Mexico Border Waste Tire Pile Project

Region 9 is moving ahead with its study to identify and evaluate high-risk waste tire piles in the California/Baja California, Arizona/Sonora border area, in order to prevent and plan for catastrophic fires. Tire pile fires in the last decade in the United States, as well as the existence of large piles in Mexico (such as El Cerro Centinela), which pose the risk of fire, have shown the urgency for locating and assessing waste tire piles, and planning for response actions and contingencies in the case of tire pile fires. These fires have the attributes of serious fires, air releases, and hazardous waste releases combined, and are a threat to citizens on both sides of the border, and emergency responders. After a preview at the Joint Response Team Meeting in Brownsville, Texas, in May 2002, draft copies of the "U.S.-Mexico Border Tire Pile Study for Fire Prevention and Mitigation" were distributed for peer review and comments, along with a supporting document, "Aerial Photographic Inventory of Tire Piles / United States - Mexico Border." In October, a Border Tire Project Team, made up of academics and agency officials from both sides of the border, met in Bisbee, Arizona, to review the revised information and schedule training. This gathering also provided an opportunity for solid waste experts from the United States (Arizona, California, and Texas) and Mexico (Baja California and Sonora) to discuss other waste tire issues, such as recycling. At this time, team members are gathering additional information on the U.S. border tire piles identified in the report, and have developed site assessment training to familiarize future audit participants with the required forms and equipment. In January 2003, training and pilot audits will be held at waste tire sites in Yuma, Arizona and San Luis Rio Colorado, Mexico. A logo for T-Shirts that Project Team Members will wear while conducting their site audits was developed.

2002

Nogales, Arizona—CyberPort Project

Region 9 is participating in a project to conceptually redesign the Mariposa port of entry in Nogales, Arizona. The project employs a binational perspective to address port issues through the involvement of key U.S. and Mexican stakeholders including business owners, government, trucking industry representatives and commercial trade associations. The project seeks to optimize the port facility's efficiency and effectiveness while strengthening safety and security and may ultimately serve as a model for other U.S.-Mexico port of entry's. U.S. EPA has been most involved and interested in project components that relate to hazardous material commodity flows and emergency response preparedness at the port of entry and other potential inspection points. To provide a comprehensive overview of the wide variety of environmental issues at the Nogales POE, Region 9 hosted the Project Team Directors from the University of Arizona and the Arizona Department of Transportation at the Region 9 Regional Offices in mid-2002. U.S. EPA experts on Nogales' water quality, air quality, waste exports/imports, pesticides, and Hazmat emergency response issues provided the Project Team with a day-long briefing. Region 9 continues its involvement with the project.

In Progress:

2003

El Paso, Texas, and Ciudad Juarez, Chihuahua— Hazardous Materials CFS

A plan to conduct one CFS in the city of El Paso, Texas, is underway because of traffic patterns of hazardous materials in trucks egress and ingress at the border. The new CFS information is vital for the Local Emergency Planning Committee (LEPC) to plan for emergencies between the Sister Cities. The information compiled will provide the hazardous materials, vulnerability, and risk analysis for the fire department to respond to potential spill incidents.

ACTIVITY UPDATE: PROGRAM DEVELOPMENT AND OUTREACH

Conducted Since Last Issue

November 9, 2001

Brownsville, Texas and Matamoros, Tamaulipas—Joint Response Team (JRT) Public Outreach Strategy Conference

The Joint Response Team (JRT) Public Outreach Strategy Conference was held in Matamoros, Mexico. The one-day mini-JRT meeting was attended by 74 participants representing Federal, state, and local agencies from the United States and Mexico, as well as representatives from private industry. The sessions were held in Spanish and English. The following five major needs of the JRT meeting were identified: 1) the creation of a binational emergency response multi-disciplinary team capable of meeting and responding to an emergency through its completion; 2) biological Hazmat response trailer to cover the border region; 3) training, equipment, facilities and possible funding to improve the quality of emergency response in accordance with the Sister City program; 4) production of a video which presents the correct communication regarding biological threats, which can be utilized by first responders down to the elementary school level; and 5) improvement of the communication training, and equipment system which is to be used to expedite information from an incident to Mexico City, Mexico, and to Washington, D.C., and Dallas, Texas, and thus allow for the quick release of funds, reducing response time to an incident.

December 2002

San Diego, California and Tijuana, Baja California—U.S.-Mexico Sister City Planning Outreach

Because the San Diego/Tijuana Plan is so complex and will require approval by two metropolitan cities and a county, Region 9 developed an informational brochure that all participating entities may distribute to their management and to the public during the planning process. It is a colorful, oversize brochure with a brief overview of the Plan and Planning process, and describes the responsibilities of the participating U.S. and Mexico Steering Committee members.

2001 - September 2002

Various Cities—U.S.-Mexico Border Conference Presentations

Formal presentations on Region 9's U.S.-Mexico Border Chemical Emergency Preparedness and Response program were made at the following conferences:

- CA/EPA Region 9 U.S.-Mexico Border Retreat, Tiburon, California (September 2002)
- Regional Response Team, Alameda, California (July 2002)
- Joint Response Team, Brownsville, Texas (May 2002)
- AZ/Sonora Commission Plenary Session, Hermosillo, Sonora, Mexico (2001)

October 2002

San Diego, California and Tijuana, Baja California—Program Development

Region 9 has provided funding and direction to support a half-time, bilingual, emergency planner/responder to work with U.S. EPA and support a variety of preparedness activities in the border area. Funding also is being provided for a technical supervisor at one-quarter time. These part-time positions are being funded for two years and will expire in October 2004.

In Progress:

December 2002

Arizona, California, Sonora, and Baja California— Border 2012 Task Forces

In anticipation of Border 2012's new organizational structure, Region 9 has entered into discussions with Arizona, California, Sonora, and Baja California officials to form Task Forces of the Regional Workgroup Structure. Representatives from each of the 4 Binational Emergency Planning Committees of Arizona/Sonora would form a Chemical Emergency Preparedness and Response Task Force and report to that Regional Working Group. In California, the Sister City Steering Committee of the San Diego/Tijuana area would form the basis of a new Task Force and the Imperial Valley/Mexicali area would form another Task Force.

ACTIVITY UPDATE: HAZARDOUS MATERIALS AND EMERGENCY RESPONSE RESOURCES

Obtained Since Last Issue:

City of Calexico, California—Trailer and Equipment

Members of the Calexico Hazmat Team stand with Lauren Volpini, U.S. EPA Region 9 in front of their new Hazmat Trailer. The Trailer is stocked with decontamination equipment and was used in the recent Imperial County/Mexicali cross border exercise.

San Diego County, California—Hazmat Emergency Response Vehicle

With grant funds provided by the U.S. EPA, the county of San Diego, Department of Environmental Health, Hazardous Materials Division has just completed building a specialized hazardous material emergency response and environmental sampling van. This specialized vehicle will be used to respond to incidents along the U.S./Mexican border in the San Diego region. The van is equipped with a wide variety of communications gear including Global Positioning System (GPS) and global satellite cellular communications. The new van also contains direct reading air monitoring and sampling instruments ranging from a portable GCMS, and X-Ray Fluorescence metals analyzer, to radiological chemical and bio-agent detection and sampling instrumentation. Personal protective equipment staged in the vehicle will allow response staff to enter and operate in environments that are immediately dangerous to life and health.

In Progress:

Spring 2003

Arizona, California, Sonora, and Baja California— Hazmat Emergency Response Resource Capability Assessment Protocol

Having found that the best way to advocate for needed additional resources is to know (and document) a jurisdiction's current state of readiness, groundwork has been laid for a Hazardous Material Emergency Resource Capability Assessment to be conducted by Region 9. The Assessment will seek the answers to the question: *How are our border communities preparing to address the increasing hazardous material risks posed by industrial and transportation-related activities including those that may be caused deliberately?* The objective is to identify resources that are rapidly available to the border cities and counties within the 60-mile border areas of California and Arizona. Although most of our U.S. border cities are relatively low in population and industrial risk, they are the gateways for significant amounts of hazardous materials awaiting export and also must consider the hazards posed by their adjacent and more populous Sister Cities. U.S. local responders must not only be prepared to protect thousands of tourists and respond to accidental releases from commercial rail and truck traffic that constantly move through their own communities, but they must be ready to help their Mexican neighbors in the event of a catastrophic chemical release. It is believed this survey tool can be applied to a variety of locations, and when translated into Spanish, could be utilized by Mexican authorities. The San Diego/Tijuana Sister City Steering Committee has agreed to conduct the study on both sides of the border for incorporation to their Sister City Plan.
