Water Reuse Study 2005

Local solutions to our long-term water needs

Water Department representatives can come to your community, professional or business group to talk about the City's current water reuse study. We'd like your input, ideas and suggestions.

Customer site in Sorrento Valley using City of San Diego recycled water for irrigation and ornamental ponds.

Did you know?

- *Currently, more than 90 percent of the City's water supply is imported from hundreds of miles away.*
- *Even with continued conservation measures; by 2030, San Diego will need 25 percent more water than is used now.*
- *Water recycling diversifies the City's water supply by creating an additional source of water.*
